Hochstein, 1992 *Beyond the Second Law* Roderick C. Dewar, Charles H. Lineweaver, Robert K. Niven, Klaus

Regenauer-Lieb, 2013-12-02 The Second Law a cornerstone of thermodynamics governs the average direction of dissipative non equilibrium processes But it says nothing about their actual rates or the probability of fluctuations about the average This interdisciplinary book written and peer reviewed by international experts presents recent advances in the search for new non equilibrium principles beyond the Second Law and their applications to a wide range of systems across physics

chemistry and biology Beyond The Second Law brings together traditionally isolated areas of non equilibrium research and highlights potentially fruitful connections between them with entropy production playing the unifying role Key theoretical concepts include the Maximum Entropy Production principle the Fluctuation Theorem and the Maximum Entropy method of statistical inference Applications of these principles are illustrated in such diverse fields as climatology cosmology crystal growth morphology Earth system science environmental physics evolutionary biology and technology fluid turbulence microbial biogeochemistry plasma physics and radiative transport using a wide variety of analytical and experimental techniques Beyond The Second Law will appeal to students and researchers wishing to gain an understanding of entropy production and its central place in the science of non equilibrium systems both in detail and in terms of the bigger picture

Advances in Modeling of Fluid Dynamics Chaoqun Liu, 2012-11-07 This book contains twelve chapters detailing significant advances and applications in fluid dynamics modeling with focus on biomedical bioengineering chemical civil and environmental engineering aeronautics astronautics and automotive We hope this book can be a useful resource to scientists and engineers who are interested in fundamentals and applications of fluid dynamics
