Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14-19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools

Independent Schools Yearbook 2012-2013 none, 2013-06-20 The highly respected book of reference of sought after Independent Schools in membership of the Independent Schools Council's Associations HMC GSA The Society of Heads IAPS ISA and COBIS *Critical Perspectives on Further Education and Training* Camilla Fitzsimons, Jerry O'Neill, 2024-03-12 This book responds to and informs the rapid growth in adult community and further education in Ireland and beyond Across 11 chapters academic and practitioner insights are explored There are chapters that focus on policy trends across the topics some of which focus on current trends in policy and practice and some of which focus more deliberately on everyday practice The book opens with perspectives from some further education students who comment on some of the themes raised These lead into an introduction which describes the landscape of a complex heterogeneous FET sector and outlines what the authors mean by critical perspectives on adult community and further education in Ireland This is followed by the philosophically oriented chapter one written by Camilla Fitzsimons that provides practical examples of possibilities for engaged pedagogy amidst curricula that on the surface appear far removed from the dimensions of power and privilege the book lays bare In chapter two experienced further and higher education practitioner Sarah Coss offers a practical and thought provoking account of the challenges of working creatively and dialogically with FE curricula whilst at the same time attending to the many bureaucratised demands of accreditation and quality assurance frameworks Chapter three written by Lilian Nwanze builds a case for the importance of discussions about racism and white privilege in FE and proposes concrete actions to embody an anti racist approach the last of which is an emphasis on love In chapter four Jane O Kelly presents a reflexive exploration of neurodiversity in adults and prompts us to consider whether their needs are recognised and accommodated in further education and training settings In chapter five Br d Connolly explores ways in which a feminist egalitarian groupwork stance can draw from social movements adult and community education to create an FE pedagogy that challenges the status quo of education as a social institution In chapter six Eilish Dillon reflects on why a critical approach to global citizenship education GCE is important and introduces some debates about the meaning and implementation of GCE In chapter seven Jerry O'Neill's partially poetic chapter demonstrates a creative and critical approach to individual and group reflexive practices which he argues is core not just to the ongoing professional development of all FET practitioners and the sector itself but can also be seen as form of practitioner based creative research in itself Leo Casey follows in chapter eight by exploring some of the overlooked connections between adult learning and digital literacy and

argues for a policy balance between models of human capital and the interests of big technology and how teaching and learning for Digital World Literacy can value lifelong learning In chapter nine primary research by Eve Cobain Suzanne Kyle and Susan Cullinane link community education to social movement theory and Ireland's community development anti poverty movement of the 1980s and 1990s They analyse the experiences of practitioners as they navigate the very different neoliberal oriented contemporary landscape In chapter ten Brendan Kavanagh Francesca Lorenzi and Elaine Macdonald explore the process of teacher identity and transformation of what they term second career teachers within further education colleges In chapter eleven Camilla and Jerry highlight the very real challenges facing educators working in a field that is characterised by high levels of precarity and argue that realising a high quality critical and sustainable distinct professional pathway for emerging educators must become a policy priority for any government that is serious about recognising the value and potential of the FET sector In the methodological spirit of adult education this contribution closes with a group dialogue between authors from across these chapters as we look forward to the work to be done and consider our hopes for the future of FET
