

### CONGRUENT TRIANGLES - Study Guide

Two triangles are congruent if and only if their corresponding sides and angles are congruent. This is known as the **CPCTC** (Corresponding Parts of Congruent Triangles are Congruent) principle.

There are four main methods to prove two triangles are congruent:

**SSS**  
If three sides of one triangle are congruent to three sides of another triangle, then the two triangles are congruent.

**SAS**  
If two sides and the included angle of one triangle are congruent to two sides and the included angle of another triangle, then the two triangles are congruent.

**ASA**  
If two angles and the included side of one triangle are congruent to two angles and the included side of another triangle, then the two triangles are congruent.

**AAS**  
If two angles and a non-included side of one triangle are congruent to two angles and a non-included side of another triangle, then the two triangles are congruent.
