Bull, 2008-04-15 With a balance of theory and practical applications Tectonic Geomorphology of Mountains is essential reading for research geologists and upper level undergraduate and graduate students in the earth sciences This book describes how tectonic events influence geomorphic processes and explores how landscapes respond to tectonic deformation in the ways in which they are weathered washed and abraded Uses new approaches to enhance theoretical models of landscape evolution and to solve practical problems such as the assessment of earthquake hazards Includes previously unpublished research and theory Examines how to use key landforms as reference levels in changing landscapes estimate rates of mountain range uplift and map seismic shaking caused by prehistorical earthquakes Presents a diverse range of examples from around the world

**Bretz's Flood** John Soennichsen, 2010-06-01 The masterful story of the scientific rebel who dared to think outside the box and changed the course of geologic history The land between Idaho and the Cascade Mountains is characterized by gullies coulees and deserts in geologic terms it is a wholly unique place on the earth In the 1920s legendary geologist and professor J Harlen Bretz peered back in time to answer the riddle of how this land came to be becoming one of the first people to explore the area Defying the conventional wisdom of his peers Bretz saw a landscape that had been instantly scoured by a flood of unprecedented scale Though met with public and academic humiliation his theory sounded too much like the biblical flood Bretz persevered and went on to discover what everyone else had failed to see Bretz's Flood tells the dramatic story of this scientific maverick how he came to study the region his radical theory that a huge flood created it and how the mainstream geologic community campaigned to derail him from pursuing an idea that satellite photos would confirm decades later

**Thought** Lalita Rana,2020-01-01 In advancing disciplines like Geography the methodological debate is a sign of health In Geography there has been extreme diversity of viewpoints on both philosophy and methodology with constant extension and also a shift in focus The methodology of geography came under debate for the first time during the middle of twentieth century when the paper published by F K Schaefer an American scholar brought both the qualitative and quantitative revolution in geographic development Shortly after this publication were discussed the paradigmatic shifts in a discipline by Thomas S Kuhn another American scholar through his seminal work in which he painted a picture of the development of science quite unlike that had gone before In order to elucidate this process of development of science Kuhn prepared a model termed as the Paradigm of Science Distinct parallels may be sought between the historical evolution of scientific discipline as explained by Thomas Kuhn and the historical evolution of the discipline of geography Seeking inspiration from the works of both of the great scholars mentioned above the present book examines the evolution of geographical thought from the perspective of Thomas Kuhn Two publications of mine 2008 2014 are on this line only However the methodological literature to understand the philosophical background making possible this disciplinary growth is too small The purpose here is to explore and screen the growth and development of Geography under sequential methodological changes over time in the light of various paradigmatic shifts with the acknowledgement of crises and revolutionary phases of development in the discipline Accordingly the work identifies eight paradigmatic shifts intercepted by eight phases of crises in the discipline

The Physical Geography and Geology of the Driftless Area Eric C. Carson,J. Elmo Rawling III,J. Michael Daniels,John W. Attig,2019-11-04 Over the course of his 43 year career James C Knox conducted seminal research on the geomorphology of the Driftless Area of southwestern Wisconsin His research covered wide ranging topics such as long term land scape evolution in the Driftless Area responses of floods to climate change since the last glaciation processes and timing of floodplain sediment deposition on both small streams and on the Mississippi River impacts of European settlement on the landscape and responses of stream systems to land use changes This volume presents the state of knowledge of the physical geography and geology of this unglaciated region in the otherwise glaciated Midwest with contributions written by Knox prior to his passing in 2012 and by a number of his former colleagues and graduate students     *Geology and Ore Deposits of the Jerome Area, Yavapai County, Arizona* Charles Alfred Anderson,Saville Cyrus Creasey,1958     *Geology of the Bighorn Canyon-Hardin Area, Montana and Wyoming* Paul William Richards,1955
