Each chapter contains both practical and detailed technical information. This basic guide provides state of the art information on Processing problems and defects during manufacturing. Plastics materials their properties and characterization. The plastics processing techniques. Plastics additives. Troubleshooting of the 5 main plastics processes. References for further reading. Plastics Processing Data Handbook D.V. Rosato, 2012-12-06. This comprehensive book provides guidelines for maximizing plastics processing efficiency in the manufacture of all types of products using all types of plastics. A practical approach is employed to present fundamental yet comprehensive coverage of processing concepts. The information and data presented by the many tables and figures interrelate the different variables that affect injection molding, extrusion, blow molding, thermoforming, compression molding, reinforced plastics molding, rotational molding, reaction injection molding, coining, casting and other processes. The text presents a great number of problems pertaining to different phases of processing. Solutions are provided that will meet product performance requirements at the lowest cost. Many of the processing variables and their behaviors in the different processes are the same as they all involve basic conditions of temperature, time and pressure. The book begins with information applicable to all processes on topics such as melt softening, flow and controls. All processes fit into an overall scheme that requires the interaction and proper control of systems. Individual processes are reviewed to show the effects of changing different variables to meet the goal of zero defects. The content is arranged to provide a natural progression from simple to complex situations which range from control of a single manual machine to simulation of sophisticated computerized processes that interface with many different processing functions.
