

I. Introduction to Financial Accounting

Financial accounting is a critical aspect of business that involves:

- Systematic recording,
- Analysis,
- Interpretation, and
- Presentation of financial information.

Its primary purpose is to communicate the financial health and performance of a business to various stakeholders. This information is crucial for making informed decisions about the entity's economic activities.

A. Definition and Purpose of Financial Accounting

Recording and Reporting Financial Transactions:

01

Financial accounting involves the comprehensive recording of all financial transactions of a business.

This includes transactions related to

- Revenue,
- Expenses,
- Assets,
- Liabilities, and
- Equity.

The process of recording transactions is known as **BOOKKEEPING**, and it lays the foundation for creating financial statements.

Financial transactions are documented in various financial records such as journals and ledgers. These records serve as a historical account of a company's financial activities, ensuring transparency and accountability.

Providing Stakeholders with Financial Information:

02

The primary goal of financial accounting is to provide relevant and reliable financial information to a wide range of stakeholders.

Stakeholders include:

- Investors,
- Creditors,
- Management,
- Government authorities,
- Employees, and
- The general public.

Financial statements, such as the income statement, balance sheet, and cash flow statement, are the key outputs of financial accounting. These statements summarize and present financial information in a structured format, making it easier for stakeholders to understand the financial position and performance of the business.
