Mercer,2023-11-10 This eight year study of an American city traces the answer to the question Who is retarded by analyzing the labeling process in a large number of community agencies Data for the study are drawn from a representative sample of 7 000 persons under fifty years of age who were tested and screened for symptoms of mental retardation The author finds that that schools label more persons as mentally retarded than any other agency and share their labels more widely with others in the community Relying on IQ test scores for diagnosis schools place many persons with scores above 70 and with no physical disabilities in the role of retardate The author contends that both the statistical model of normal and the uncultural viewpoint of educators and clinicians work to the disadvantage of the poor and the ethnic minorities Given the opportunity many persons demonstrate by their ability to cope with the problems in other

areas of life that they are not comprehensively incompetent The author makes several policy recommendations First she suggests lowering the IQ score cutoff point used by schools in determining who shall be labeled as retarded Second she recommends that the clinicians use the two dimensional definition of retardation proposed by the American Association of Mental Deficiency subnormality in both intellectual performance and adaptive behavior Third she concludes that pluralistic assessment procedures must be employed to take into account cultural biases in IQ tests designed to measure cognitive skills This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1973

Fleisher, 2014-08-06 A substantial body of literature exists on functional gastrointestinal disorders in children and on the bio psycho social model of clinical practice However the integration of these concepts into the management of children with functional disorders remains poorly defined A satisfactory clinical outcome often depends on the clinician's ability to discern not only the biological factors in illness but also the unique cognitive and emotional needs that pediatric patients bring to the task of healing This book further defines bio psycho social theory with respect to six groups of functional disorders and illustrates through clinical examples concepts of management developed during 45 years of practice This book is aimed at pediatricians family practitioners pediatric mental health practitioners pediatric nurse practitioners and pediatric gastroenterologists
