### **External Anatomy:**

Become familiar with the organism. Use these diagrams to become more aware of where things are and where to cut. Make a plan of what you hope to do, answer our questions, and use our guide to move through the organism.

Before you begin, be sure to evaluate where you want to cut. It might be a good idea to make marks on your cutting board of where you plan to make any cuts, especially cross section cuts.

What does the organism look like?

Are there any areas you want to make note of or places you'll need to remember in the future?

Where do you think it will be the most difficult to cut? Why?

What do you predict the organism will look like on the inside?

**Atlas and Dissection Guide for Comparative Anatomy** Saul Wischnitzer, 2006-02-13 Ideal for undergraduate comparative anatomy courses this classic manual combines comprehensive illustrations text and a clear readable design. Organisms include protochordates lamprey dogfish shark mud puppy and cat. *Laboratory Guide to Vertebrate Dissection for Students of Anatomy* Arthur Beeny Appleton, 1929 As its title indicates this is a book for use in a practical comparative anatomy course. It is intended for a somewhat unusual class of student and consequently its contents outlook and method of treatment are unlike those of the standard texts in this subject. As stated in the preface it is assumed that the student has already done a course in elementary zoology including the usual vertebrate types and has also examined in more detail a mammal. Unless this mammal were man a number of comparisons in the book would be missed. To obtain full benefit from it the student should obviously have taken the preliminary medical studies including a fair amount of human anatomy. This is not meant to imply that the student of advanced zoology cannot get many useful hints and fresh points of view from its pages. The types treated in a series of regional dissections are the lamprey the dogfish *Squalus Necturus* the lizard and the dog. As it is intended for assistance in dissection information regarding osteology and the details of the central nervous system have been purposely omitted and conversely the muscles are treated somewhat more fully than is customary.

*Exploring Zoology: A Laboratory Guide, Third Edition* David G. Smith, Michael P. Schenk, 2021-01-01 Exploring Zoology A Laboratory Guide provides a comprehensive hands on introduction to the field of zoology. Knowledge of the principal groups of animals is fundamental to understanding the central issues in biology. This full color lab manual provides a diverse selection of exercises covering the anatomy physiology behavior and ecology of the major invertebrate and vertebrate lineages. Great care has been taken to provide information in an engaging student friendly way. The material has been written to be easily adapted for use with any introductory zoology textbook. **Anatomy and Dissection of the Rat** Warren F.

Walker, Dominique G. Homberger, 1997-12-15 The careful explanation of each step of the dissection helpful diagrams and illustrations and detailed discussion of the structure and function of each system in *Anatomy and Dissection of the Rat* Third Edition optimize the educational value of the dissection process. These laboratory exercises are available as a bound set for the first time ever. They are still offered separately as well. This popular series which includes *Anatomy and Dissection of the Frog* and *Anatomy and Dissection of the Fetal Pig* is geared toward introductory courses in biology comparative anatomy and zoology. **Comparative Vertebrate Anatomy: A Laboratory Dissection Guide** Kenneth Kardong, Edward J.

Zalisko, 2005-05-05 This high quality laboratory manual may accompany any comparative anatomy text but correlates directly to Kardong's *Vertebrates Comparative Anatomy Function Evolution* text. This text carefully guides students through dissections and is richly illustrated. First and foremost the basic animal architecture is presented in a clear and concise manner.
