

Air Conditioning

AIR CONDITIONING CONTROLS

The air conditioning system features automatic temperature and air distribution control, which is programmed to maintain optimum levels of comfort within the vehicle in all but the most severe climatic conditions.

Where the controls can be adjusted manually to satisfy individual requirements, allowing the system to function automatically (in Auto mode) is by far the simplest method of operation for the driver and is preferable in most operating conditions.

1. Auto mode

- Press **AUTO** (1) for fully automatic operation.
- Press the temperature control switches (2) on either side of the display to select the required temperature.
- Let the automatic temperature control system do the rest.

In Auto mode, air distribution and blower speeds are adjusted automatically to ensure and then maintain the desired temperature (An enclosed area in the centre of the three symbols together with the air distribution and blower speed settings).

Even the air distribution and blower controls can be operated independently to override automatic setting. In this case, the status symbols will move outside the enclosure in the centre of the display to indicate that they are no longer being controlled automatically.

NOTE: If the air distribution and blower controls are operated independently, the system will not be able to achieve or maintain the set temperature settings.

Air Conditioning

Temperature control
The driver can select the required temperature for the vehicle by using the temperature control switches on either side of the display. The temperature control switches can also be used to select the fan speed, air distribution and defrost/defog switch for the system.

Temperatures above 20°C (68°F) and below 10°C (50°F) cannot be set. Above or below these maximum and minimum settings, the system will operate in the display.

The temperature shown on the display are colour-coded: red, yellow, green, blue and white. All temperatures only will not be set below 10°C (50°F).

NOTE: The system will not operate if the temperature on the passenger side of the vehicle is more than 3°C (5°F) greater or lower than the temperature set for the driver's side.

2. Screen mode

If the indicator is missing to control in set, press the **SCREEN** button. The system will instantly direct its output to achieve maximum screen clearing by:

- setting the blower speed to maximum.
- defining air flow to the screen only.

In addition, the red and pink screen buttons are activated or (or their time) operating use of maximum if they are already selected.

NOTE: Temperature and blower speed control can be adjusted and air recirculation used manually if required.

How to **SCREEN** button a second time or press **AUTO** to leave the Defrost mode - the system will return automatically to Auto mode.

3. Economy mode

Press the **ECON** button to operate (the display shows **ECON**).

In economy mode the air conditioning compressor is switched off and the system functions as a conventional heating and ventilation system. This reduces the load on the engine, thereby reducing fuel consumption.

Select Economy mode whenever air conditioning is not required i.e. in cold weather when the exterior temperature is lower than the temperature required for the passenger compartment.

The air distribution, blower and recirculation controls can be operated independently.

Pressing the **Screen** button a second time will switch the air conditioning compressor on and return the system to Auto mode.

NOTE: In Economy mode, it is possible to switch the blower off (no segments showing in the display).

4. On/off button

Press to switch on or off. When switching on, note that the system automatically restores the mode and control settings that were last used.

5. Blower button

Press the button to adjust the blower speed. The blower speed increases incrementally with each press of the button, until maximum fan speed is reached (the display shows five segments and the word **MAX**).

Once the maximum fan speed has been reached, another press of the button returns the blower to its slowest speed (one segment shows in the display).
