Information Technology in Geo-Engineering António Gomes Correia, Joaquim Tinoco, Paulo Cortez, Luís Lamas, 2019-09-24 These proceedings address the latest developments in information communication and technologies for geo engineering The 3rd International Conference on Information Technology in Geo Engineering ICITG 2019 held in Guimarães Portugal follows the previous successful installments of this conference series in Durham 2014 and Shanghai 2010 The respective chapters cover the following Use of information and communications technologies Big data and databases Data mining and data science Imaging technologies Building information modelling applied to geo structures Artificial intelligence Smart geomaterials and intelligent construction Sensors and monitoring Asset management Case studies on design construction and maintenance Given its broad range of coverage the book will benefit students educators researchers and professional practitioners alike encouraging these readers to help take the geo engineering community into the digital age Rock Dynamics and Applications 3 Charlie C. Li, Xing Li, Zong-Xian Zhang, 2018-06-18 Rock Dynamics Experiments Theories and Applications is a collection of scientific and technical papers presented at the Third International Conference on Rock Dynamics and Applications RocDyn 3 Trondheim Norway 26 27 June 2018 The papers in the book reflect the recent developments in experiment and theory as well as engineering applications of rock dynamics Rock dynamics studies the response of rock and rock masses under dynamic loading and during the state transition from static loading to kinetic movement It also includes the study of engineering countermeasures to dynamic instability of rock and rock masses The topics in the book include Dynamic theories Numerical simulation Propagation of stress waves Dynamic tests of rock Stability of underground openings under dynamic loading Rockburst Seismic monitoring Dynamic rock support Blasting Earthquake related rock structure damage etc Applications such as rockburst dynamic rock support seismic monitoring blasting and earthquake related rock structure damage are paid special attention in Rock Dynamics Experiments Theories and Applications The papers from specialists both from mining and tunnelling branches discuss commonly interested dynamic issues Their experience and knowledge in the application of rock dynamics are extremely valuable for all academics engineers and professionals who work with rock dynamics **Stochastic Models for Geodesy and Geoinformation Science** Frank Neitzel, 2021-02-12 In geodesy and geoinformation science as well as in many other technical disciplines it is often not possible to directly determine the desired target quantities Therefore the unknown parameters must be linked with the measured values by a mathematical model which consists of the functional and the stochastic models The functional model describes the geometrical physical relationship between the measurements and the unknown parameters This relationship is sufficiently well known for most applications With regard to the stochastic model two problem domains of fundamental importance arise 1 How can stochastic models be set up as realistically as possible for the various geodetic observation methods and sensor systems 2 How can the stochastic information be adequately considered in appropriate least

squares adjustment models Further questions include the interpretation of the stochastic properties of the computed target values with regard to precision and reliability and the use of the results for the detection of outliers in the input data measurements In this Special Issue current research results on these general questions are presented in ten peer reviewed articles The basic findings can be applied to all technical scientific fields where measurements are used for the determination of parameters to describe geometric or physical phenomena
