POWER SHIFT

Power Shift transmissions (optional equipment) in 3020 Tractors are hydraulically-actuated, having no spring-loaded transmission clutch.

A pedal, located at the left side of the operator's platform, can be used for "inching" the tractor or for emergency stops.

A spring-loaded clutch, located in a recess at the rear of the engine flywheel, provides a means of disengaging the engine from the transmission for easier cold weather starting.

The clutch is operated by the engine disconnect lever located to the left of the control support. Pulling the lever to the rear disengages the engine. The lever will latch in this position. The engine is engaged by pulling back slightly on the lever while pulling the latch button at the left rear of the support.

FUEL SYSTEM

The large-capacity fuel tank on all tractors is located at the front of the tractor just ahead of the radiator.

DIESEL

In diesel systems a fuel pump, driven by the camshaft, provides a constant supply of fuel to the injection pump.

A large-capacity fuel filter is connected between the fuel pump and the injection pump.

The filter contains two replaceable micronic filtering elements.

GASOLINE

In gasoline systems, a fuel pump driven from the camshaft, assures a constant supply of gasoline to the updraft carburetor. A filter and sediment bowl on the fuel pump, and a screen in the carburetor, insure that the gasoline flowing to the engine is clean.

LP-GAS

The LP-Gas fuel system includes a converter which assures that the fuel is in vapor form when supplied to the engine updraft carburetor. The converter uses the heat from the engine coolant for its operation.
