Tsohatzidis, 2014-02-03 There are fewer distinctions in any language than there are distinct things in the universe If therefore languages are ways of representing the universe a primary function of their elements must be to allow the much more varied kinds of elements out of which the universe is made to be categorized in specific ways A prototype approach to linguistic categories is a particular way of answering the question of how this categorization operates It involves two claims First that linguistic categorization exploits principles that are not specific to language but characterize most if not all processes of cognition Secondly that a basic principle by which cognitive and linguistic categories are organized is the prototype principle which assigns elements to a category not because they exemplify properties that are absolutely required of each one of its members but because they exhibit in varying degrees certain types of similarity with a particular category member which has been established as the best example or prototype of its kind The development of the prototype approach into a satisfactory body of theory obviously requires both that its empirical base be enriched and that its conceptual foundations be clarified These are the areas where this volume in its 26 essays makes original contributions The first two parts contain discussions in which various kinds of linguistic phenomena are analysed in ways that make essential use of prototype notions The last two parts contain discussions in which prototype notions themselves become the object rather than the instrument of analytical scrutiny

Lesh, 2012-10-12 The Handbook of Research Design in Mathematics and Science Education is based on results from an NSF supported project REC 9450510 aimed at clarifying the nature of principles that govern the effective use of emerging new research designs in mathematics and science education A primary goal is to describe several of the most important types of research designs that have been pioneered recently by mathematics and science educators have distinctive characteristics when they are used in projects that focus on mathematics and science education and have proven to be especially productive for investigating the kinds of complex interacting and adapting systems that underlie the development of mathematics or science students and teachers or for the development dissemination and implementation of innovative programs of mathematics or science instruction The volume emphasizes research designs that are intended to radically increase the relevance of research to practice often by involving practitioners in the identification and formulation of the problems to be addressed or in other key roles in the research process Examples of such research designs include teaching experiments clinical interviews analyses of videotapes action research studies ethnographic observations software development studies or curricula development studies more generally and computer modeling studies This book s second goal is to begin discussions about the nature of appropriate and productive criteria for assessing and increasing the quality of research proposals projects or publications that are based on the preceding kind of research designs A final objective is to describe such guidelines in forms that will be useful to graduate students and others who are novices to the fields of mathematics or science education research The NSF supported project from which this book developed involved a series of mini conferences in which leading researchers in mathematics and science education developed detailed specifications for the book and planned and revised chapters to be included Chapters were also field tested and revised during a series of doctoral research seminars that were sponsored by the University of Wisconsin s OERI supported National Center for Improving Student Learning and Achievement in Mathematics and Science In these seminars computer based videoconferencing and www based discussion groups were used to create interactions in which authors of potential chapters served as guest discussion leaders responding to questions and comments from doctoral students and faculty members representing more than a dozen leading research universities throughout the USA and abroad A Web site with additional resource materials related to this book can be found at <http://www.soe.purdue.edu/smsc/lesh> This internet site includes directions for enrolling in seminars participating in ongoing discussion groups and submitting or downloading resources which range from videotapes and transcripts to assessment instruments or theory based software to publications or data samples related to the research designs being discussed **Patrons and Viewers in Late Antiquity** Stine Birk, Birte Poulsen, 2012-11-23 The monumentality and the often rich embellishment of late antique buildings and

monuments emphasises their importance to the patrons that commissioned them However the understanding and interpretation of the message conveyed may often be obtained through the study of the other important agent namely the viewer This book contains a collection of papers that focuses on the way patrons pagan as well as Christian conveyed messages through material and visual culture and on the reception by the viewers The contributions investigate how patrons of luxurious buildings elaborate grave monuments and churches used architecture images and inscriptions to demonstrate political social and religious power The visual arts were a strong factor in communicating identity and attitudes both in the public and private spheres also in Late Antiquity

Methods and Applications in Educational Psychology Antonio P. Gutierrez de Blume, Kai-Yu Tang, María Soledad Segretin, Christelle Declercq, Mei-Shiu Chiu, 2023-10-13 *Cognitive Science*

Neil A. Stillings, 1995 Cognitive Science is a single source undergraduate text that broadly surveys the theories and empirical results of cognitive science within a consistent computational perspective In addition to covering the individual contributions of psychology philosophy linguistics and artificial intelligence to cognitive science the book has been revised to introduce the connectionist approach as well as the classical symbolic approach and adds a new chapter on cognitively related advances in neuroscience Cognitive science is a rapidly evolving field that is characterized by considerable contention among different views and approaches Cognitive Science presents these in a relatively neutral manner It covers many new orientations theories and findings embedding them in an integrated computational perspective and establishing a sense of continuity and contrast with more traditional work in cognitive science The text assumes no prerequisite knowledge introducing all topics in a uniform accessible style Many topics such as natural language processing and vision however are developed in considerable depth which allows the book to be used with more advanced undergraduates or even in beginning graduate settings A Bradford Book

Interactions on Digital Tablets in the Context of 3D Geometry Learning David Bertolo, 2016-07-14 Over the last few years multi touch mobile devices have become increasingly common However very few applications in the context of 3D geometry learning can be found in app stores Manipulating a 3D scene with a 2D device is the main difficulty of such applications Throughout this book the author focuses on allowing young students to manipulate observe and modify 3D scenes using new technologies brought about by digital tablets Through a user centered approach the author proposes a grammar of interactions adapted to young learners and then evaluates acceptability ease of use and ease of learning of the interactions proposed Finally the author studies in situ the pedagogic benefits of the use of tablets with an app based on the suggested grammar The results show that students are able to manipulate observe and modify 3D scenes using an adapted set of interactions Moreover in the context of 3D geometry learning a significant contribution has been observed in two classes when students use such an application The approach here focuses on interactions with digital tablets to increase learning rather than on technology First defining which interactions allow pupils to realize tasks needed in the learning process then evaluating the impact of these interactions on the learning process This is the first time that both

interactions and the learning process have been taken into account at the same time Answer to Jung Lynn Brunet, 2018-11-08 The Red Book is C G Jung's record of a period of deep penetration into his unconscious mind in a process that he called active imagination undertaken during his mid life period Answer to Jung Making Sense of The Red Book provides a close reading of this magnificent yet perplexing text and its fascinating images and demonstrates that the fantasies in The Red Book are not entirely original but that their plots characters and symbolism are remarkably similar to some of the higher degree rituals of Continental Freemasonry It argues that the fantasies may be memories of a series of terrifying initiatory ordeals possibly undergone in childhood using altered or spurious versions of these Masonic rites It then compares these initiatory scenarios with accounts of ritual trauma that have been reported since the 1980s This is the first full length study of The Red Book to focus on the fantasies themselves and provide such an external explanation for them Sonu Shamdasani describes The Red Book as an incomplete task that Jung left to posterity as a message in a bottle that would someday come ashore Answer to Jung brings its message to shore providing a coherent but disturbing interpretation of each of the fantasies and their accompanying images Chapters Chapter 4 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license
