China, the USA and Capitalism's Last Crusade William Briggs,2021-10-29 As the sun rises on China and sets on America the world holds its breath China the USA and Capitalism s Last Crusade looks at the rise of China and the decline of the USA but from a different angle William Briggs argues that this struggle for economic supremacy is being played out against a much bigger backdrop the decline of the economic structure of capitalism In this sense the decline of the USA is portrayed as that larger economic decline in microcosm Briggs examines the relationship between state and capital of how capitalism came to

dominate the world and of the historical political and economic rise of both the USA and China He shows that the struggle between the two nations has little to do with cultural historical demographic political or ideological differences but with what they have in common Despite the portrayal of China as being socialist it functions as a capitalist economy in the globalised capitalist world While its journey to capitalism may have differed the end point is the same and this is why there is such animosity such conflict such acrimony between the two states

The Democracy That Never Was Gary Teeple, 2025-02-28 Liberal democracy is usually treated as an independent variable as possessing the absolutes of democratic rule Its variable forms changing principles and practice and conscious destruction by its own advocates in particular the United States however suggest that it is not what it appears to be This book argues that it is a dependent variable the political form required by the changing configurations of national capital and their countervailing forces The forms of liberal democracy have always shifted in concert with the mode of production as their premise The absolutes of liberal democracy the author contends have never been anything but the abstracted principles of the marketplace Their nature has now become especially visible for what they have been because the premise as national capital development has changed leaving liberal democracy as a form without its original content and its present content out of keeping with a national jurisdiction As a political form it persists but its role has been transformed from the regulation of national capital accumulation to the enforcer of the demands of global configurations of capital It is a role that its citizens implicitly understand as revealed in widespread political cynicism decreasing electoral participation and declining legitimacy that require ever greater measures of deceit from political leaders and increased means of coercive social control including militarized police forces and pervasive electronic surveillance There can be no going back to the stage of national politics because the neoliberal content of liberal democratic policies represents the necessities of global capital And it is the

contradictions of global capital that define the character of early 21st century political conflict

Do Credit Shocks Matter? A Global Perspective Mr. Ayhan Kose, Mr. Christopher Otrok, Raju Huidrom, Mr. Thomas Helbling, 2010-11-01 This paper examines the importance of credit market shocks in driving global business cycles over the period 1988-2009. We first estimate common components in various macroeconomic and financial variables of the G7 countries. We then evaluate the role played by credit market shocks using a series of VAR models. Our findings suggest that these shocks have been influential in driving global activity during the latest global recession. Credit shocks originating in the United States also have a significant impact on the evolution of world growth during global recessions.

Clearing Services for Global Markets Tina P. Hasenpusch, 2009-09-24 Clearing forms the core part of a smooth and efficiently functioning financial market infrastructure. Traditionally it has been provided by clearing houses, most of which today act as a central counterparty (CCP) between the two sides of a trade. The rapid growth of cross border trading has sparked discussion on the most efficient industry structure, particularly in Europe and the US. At the heart of this discussion lies the question of whether the implementation of a single clearing house creates greater benefits than a more competitive but interlinked market structure. This is the starting point for this book, which analyses the efficiency of clearing and clearing industry structure. Along with clear cut definitions and a concise characterisation and descriptive analysis of the clearing industry, the book determines the efficiency impact of various cross border integration and harmonisation initiatives between CCPs. This serves to identify the most preferable future structure for the clearing industry.

Global Financial Stability Report, April 2014 International Monetary Fund, 2014-04-09 The April 2014 Global Financial Stability Report finds that despite much progress the global financial system remains in a transitional period with stability conditions far from normal. Advanced and emerging market economies alike need to make a successful shift from liquidity to growth driven markets, which will require a number of elements including a normalization of US monetary policy, financial rebalancing in emerging markets, further progress in the euro area integration and continued implementation of Abenomics in Japan. This report also examines how changes in the investor base and financial deepening affect emerging market economies, as well as looks at the issue of banks considered too important to fail, providing new estimates of the implicit funding subsidy these banks receive.
