The Nervous System

The nervous system is an extremely complex network of neurons that are capable of processing information throughout the human body. The main purpose of the nervous system is to receive information and pass it to the appropriate organs and tissues. The nervous system is divided into two main parts: the central nervous system (CNS) and the peripheral nervous system (PNS).

Central Nervous System

The central nervous system, or CNS, is the part of the nervous system that is located in the brain and spinal cord. It is the main control center of the body and is responsible for processing information and sending out instructions. The CNS is divided into two main parts: the brain and the spinal cord. The brain is the largest part of the CNS and is located in the head. It is responsible for processing information and sending out instructions. The spinal cord is a long, thin structure that runs down the back. It is responsible for carrying messages between the brain and the rest of the body.

Peripheral Nervous System

There are all parts of the nervous system that are not part of the CNS. The PNS is made up of all the nerves that are outside the brain and spinal cord. It is responsible for carrying messages between the CNS and the rest of the body. The PNS is divided into two main parts: the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for controlling voluntary movements. The autonomic nervous system is responsible for controlling involuntary movements.

The PNS is divided into two main parts: the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for controlling voluntary movements. The autonomic nervous system is responsible for controlling involuntary movements. The autonomic nervous system is divided into two main parts: the sympathetic nervous system and the parasympathetic nervous system. The sympathetic nervous system is responsible for the "fight or flight" response. The parasympathetic nervous system is responsible for the "rest and digest" response.

The Brain

The brain is the most important part of the nervous system. It is responsible for processing information and sending out instructions. The brain is divided into two main parts: the cerebrum and the cerebellum. The cerebrum is the largest part of the brain and is responsible for most of the brain's functions. The cerebellum is a smaller part of the brain that is responsible for coordinating movement and balance. The brain is also divided into two main hemispheres: the left hemisphere and the right hemisphere. Each hemisphere has different functions.
