

Astronomy 110 Lab Exercise: Hertzsprung-Russell Diagram

In the above HR diagram, the luminosity is given in units of the Sun's luminosity. In other words, 1 means the same luminosity as the Sun; 10^2 means 100 times the luminosity of the Sun (or in short, 100 solar luminosities), and so on.

Part 1: Temperature versus Luminosity of Stars

1. In the HR diagram above, imagine that there is a star at each labeled position A-E. Of these stars, which star has the greatest luminosity?
2. Which stars have roughly the same temperature? Which stars have roughly the same luminosity?
4. Do stars with the same temperature necessarily have the same luminosity? If so, explain how; if not, give a counterexample from the labeled stars in the diagram.
- 5a. Which of the labeled stars is the most like our Sun? (Recall the Sun's surface temperature $T=5800\text{K}$.)
- 5b. What would be the approximate luminosity of a main sequence star with temperature 12,000 K? What spectral type would this star have?
6. Which star(s) above would appear reddish in color? Which star(s) would appear bluish? Explain.
7. The diagonal band of stars that star A, B, and C lie on is called the *main sequence*. For a star on the

highlight specific data variables by mapping them to both sensory modalities. However, the success of an audiovisual data interface is dependent on the integration of the two senses and how this is utilized in the resulting interface. This thesis contributes to sonification research by taking a human centered approach to integrating sonification and visualization. The human centered approach involved working with domain experts and users during the design process of the sonification and to create perceptually motivated designs by utilizing how the auditory and visual systems complement each other and how they are integrated in cognition for sense making. The thesis contains six studies that explored the integration of sonification and visualization ranging from literature surveys to design oriented studies. A state of the art report provided a survey on the integration of sonification and visualization to offer an introduction to the field to new and current practitioners. In another study, a conceptual framework for scene analysis was developed to support the design and analysis of audiovisual data representations. The rest of the studies were design oriented where each focused on a specific aspect of how sonification can complement visualization depending on the domain and tasks of the study. Other than providing concrete examples of audiovisual integrations, the main contributions of the design oriented studies are provided in their evaluation results in the form of design recommendations. These include the use of redundant mappings for multi dimensional data analysis and considering subjective differences of domain experts for situational awareness support in air traffic control. The design oriented studies also compared sonification designs where one study showed a potential trade off of using informative or pleasant designs for astronomy science communication. Another comparison showed that concrete sonification designs can complement abstract visualizations. Lastly, the thesis provides design considerations by comparing the level of redundancy, indexicality and complexity of each sonification design through the developed conceptual framework. Overall, this thesis offers motivated recommendations for the integration of sonification and visualization.

Med en kad m ngd och tillg ng till data och ett v xande krav p m nniskor i analys och beslutsprocesser finns det ett behov av att ytterligare utnyttja perceptuella och kognitiva f rm gor f r att underl tta dessa processer. En metod f r att st dja i dessa uppgifter r att utnyttja fler sensoriska system till exempel h rseln f r att ka informationsfl det och f en mer omfattande f rst else av ett dataset eller situation samtidigt som fler sinnen involveras f r att engagera anv ndaren. Audiovisuella datagr nssnitt g r det m jligt att distribuera datavariabler till vilket som helst av de tv sinnena f r att minska risken f r kognitiv verbelastning eller att lyfta fram specifika datavariabler genom att koppla dem till b da de sensoriska modaliteterna. Hur framg ngsrikt ett audiovisuellt datagr nssnitt r beror p hur de tv sinnena integreras och hur detta utnyttjas i det resulterande gr nssnittet. Den h r avhandlingen bidrar till forskningen om sonifiering genom att tillhandah lla en m nniskocentrerad integration av sonifiering och visualisering. Det m nnisko centrerade tillv gag ngss ttet inneb r att man arbetar med dom nexperter och anv ndare under designprocessen av sonifieringen och att man skapar perceptuellt motiverade designer genom att utnyttja hur de auditiva och visuella systemen kompletterar varandra och hur de integreras i kognitionen f r meningsskapande. Avhandlingen inneh ller sex studier som

undersökte integrationen av sonifiering och visualisering vilket sträckte sig från litteraturversikter till designorienterade studier. En state of the art rapport gav en översikt av integrationen av sonifiering och visualisering för att erbjuda en introduktion till fältet för nya och nuvarande utövare. I en annan studie utvecklades ett konceptuellt ramverk för scenanalys som kan användas som stöd vid utformning och analys av audiovisuella datarepresentationer. Resten av studierna var designorienterade där de fokuserade på en specifik aspekt av hur sonifiering kan komplettera visualisering beroende på studiens domän och uppgifter. Förutom att ge konkreta exempel på audiovisuella integrationer är de viktigaste bidragen från studierna deras utvärderingsresultat i form av designrekommendationer. Dessa inkluderar användning av redundanta mappningar för flerdimensionell dataanalys och beaktande av subjektiva skillnader hos domänexperter för stöd till situationsmedvetenhet inom flygledning. Studierna jämförde också olika sonifieringsdesigner där en studie visade en potentiell avvägning mellan att använda informativ eller behaglig design för astronomisk vetenskapskommunikation medan en annan studie visade att en konkret sonifieringsdesign kan komplettera abstrakta visualiseringar. Slutligen ger avhandlingen designvervordningen genom att jämföra nivån av redundans, indexikalitet och komplexitet för varje sonifieringsdesign genom det utvecklade konceptuella ramverket. Sammantaget ger denna avhandling motiverade rekommendationer för integrering av sonifiering och visualisering.
