[Inside Teacher Education: Challenging Prior Views of Teaching and Learning](#) S.M. Bullock, 2011-07-23 Learning to teach is complex Teacher candidates begin a preservice program with powerful tacit assumptions about how teachers teach based on lengthy apprenticeships of observation over many years as students Virtually all teacher education programs provide a mixture of coursework and classroom experience Much has been written about the theory into practice approach in teacher education an approach that assumes teacher candidates who have been provided with instructions about how to teach will be able to recall and apply them in a school setting In reality teacher candidates report considerable difficulty enacting theory in practice to the point that many question the value of coursework This book takes an in depth look at five future teachers in one teacher education program analyzing and interpreting how

they and their teacher educators learn from experience during both coursework and practicum experiences Many assumptions about the complex challenges of teaching teachers are called into question Is the role of a teacher educator to synthesize research based best practices for candidates to take to their field placements Does the preservice practicum experience challenge or reinforce a lifetime of socialized experiences in schools Must methods courses always be seen by most teacher candidates as little more than sites for collecting resources Where and how do candidates construct professional knowledge of teaching The data illustrate clearly that methods courses can be sites for powerful learning that challenges tacit assumptions about how and why we teach *Growing Up with Science* Cavendish Square Publishing LLC,2006 Volume fifteen of a seventeen volume alphabetically arranged encyclopedia contains approximately five hundred articles introducing key aspects of science and technology Microcomputer-Based Labs: Educational Research and Standards Robert F. Tinker,2012-12-06 Microcomputer based labs the use of real time data capture and display in teaching give the learner new ways to explore and understand the world As this book shows the international effort over a quarter century to develop and understand microcomputer based labs MBL has resulted in a rich array of innovative implementations and some convincing evidence for the value of computers for learning The book is a sampler of MBL work by an outstanding international group of scientists and educators based on papers they presented at a seminar held as part of the NATO Special Programme on Advanced Educational Technology The story they tell of the development of MBL offers valuable policy lessons on how to promote educational innovation The book will be of interest to a wide range of educators and to policy makers Handbook for Achieving Gender Equity Through Education Susan S. Stealth Assessment Valerie Jean Shute,Matthew Ventura,2013 An approach to performance based assessments that embeds assessments in digital games in order to measure how students are progressing toward targeted goals To succeed in today s interconnected and complex world workers need to be able to think systemically creatively and critically Equipping K 16 students with these twenty first century competencies requires new thinking not only about what should be taught in school but also about how to develop valid assessments to measure and support these competencies In Stealth Assessment Valerie Shute and Matthew Ventura investigate an approach that embeds performance based assessments in digital games They argue that using well designed games as vehicles to assess and support learning will help combat students growing disengagement from school provide dynamic and ongoing measures of learning processes and outcomes and offer students opportunities to apply such complex competencies as creativity problem solving persistence and collaboration Embedding assessments within games provides a way to monitor players progress toward targeted competencies and to use that information to support learning Shute and Ventura discuss problems with such traditional assessment methods as multiple choice questions review evidence relating to digital games and learning and illustrate the stealth assessment approach with a set of assessments they are developing and embedding in the digital game Newton s Playground These stealth assessments are intended to measure levels of creativity persistence and conceptual understanding of Newtonian physics during game play Finally they consider future research directions related to stealth assessment in education

*Metaphor and Analogy in Science Education* Peter J. Aubusson,Allan G. Harrison,Stephen M. Ritchie,2006-06-28 Years ago a primary teacher told me about a great series of lessons she had just had The class had visited rock pools on the seashore and when she asked them about their observations they talked about it was like a factory it was like a church it was like a garden it was like our kitchen at breakfast time etc Each student s analogy could be elaborated and these analogies provided her with strongly engaged students and a great platform from which to develop their learning about biological diversity and interdependence In everyday life we learn so many things by comparing and contrasting The use of analogies and metaphors is important in science itself and their use in teaching science seems a natural extension but textbooks with their own sparse logic do not help teachers or students David Ausubel in the 1960s had advocated the use of advance organisers to introduce the teaching of conceptual material in the

sciences and some of these had an analogical character However research on the value of this idea was cumbersome and indecisive and it ceased after just a few studies In the 1980s research into children s conceptions of scientific phenomena and concepts really burgeoned and it was soon followed by an exploration of a new set of pedagogical strategies that recognised a student in a science class is much more than a tabula rasa
