

connected to the same circuit, the total electrical load must be considered in selecting the proper wire size. **DO NOT USE UNDERSIZE WIRE.**

**FUSES.** Refer to the National Electric Code to determine the proper fuse or circuit breaker rating required. When selecting fuses, remember the momentary starting current of an electric motor is greater than its full load current. Time-delay or "slow-blow" fuses are recommended.

#### Single-Phase Wiring

#### COMPRESSOR LUBRICATION

**CAUTION** Do not operate without lubricant or with inadequate lubricant. Ingersoll-Rand is not responsible for compressor failure caused by inadequate lubrication.

**SYNTHETIC LUBRICANT.** We recommend Ingersoll-Rand synthetic compressor lubricant from start-up. See the WARRANTY section for extended warranty information.

**ALTERNATE LUBRICANTS.** You may use a petroleum-based lubricant that is premium quality, does not contain detergents, contains only anti-rust, anti-oxidation, and anti-foam agents as additives, has a flashpoint of 440°F (227°C) or higher, and has an auto-ignition point of 650°F (343°C) or higher.

See the petroleum lubricant viscosity table below. The table is intended as a general guide only. Heavy duty operating conditions require heavier viscosities. Refer specific operating conditions to your dealer for recommendations.

| Temperature Around Unit |             | Viscosity @ 100°F (37.8°C) |             | Viscosity Grade |     |
|-------------------------|-------------|----------------------------|-------------|-----------------|-----|
| °F                      | °C          | SUS                        | Centistokes | ISO             | SAE |
| 40 & below              | 4.4 & below | 150                        | 32          | 32              | 10  |
| 40 - 50                 | 4.4 - 10.0  | 500                        | 110         | 500             | 30  |
| 50 - 125                | 10.0 - 51.0 | 750                        | 150         | 750             | 40  |

If you use a petroleum-based compressor lubricant at start-up and decide to convert to Ingersoll-Rand synthetic compressor lubricant later on, the compressor valves must be thoroughly decarbonized and the crankcase must be flushed before conversion.

#### FILLING PROCEDURES:

1. Unscrew and remove the oil fill plug (A).
2. Slowly fill the crankcase with lubricant until the lubricant reaches the top thread of the oil fill opening and the top of the sight glass. Crankcase capacity for the S50 is one-half (0.5) liter. Crankcase capacity for the S55 is one (1) liter.
3. Replace the oil fill plug **HAND TIGHT ONLY.**

#### Filling Procedures

#### INITIAL START-UP

Follow this procedure before putting the unit into service for the first time:

1. Set the pressure switch lever to "OFF".

#### Pressure Switch Lever

2. Open the service valve fully to prevent air pressure from building in the tank. (A=Open, B=Closed)

#### Service Valve

3. Move the pressure switch lever to "ON/AUTO". The unit will start.
4. Run the unit for 30 minutes. Ensure the service valve is fully open and there is no tank pressure build up.

**CAUTION** Unusual noise or vibration indicates a problem. Do not continue to operate until you identify and correct the source of the problem. **IF EMERGENCY CONDITIONS ARE ENCOUNTERED, SHUT OFF THE MAIN POWER IMMEDIATELY.**

5. After 30 minutes, close the service valve fully. The air receiver will fill to cut-out pressure and the motor will stop. The unit is now ready for use.

#### OPERATION

#### GENERAL

Your air compressor was designed for 100% continuous duty operation with the use of Ingersoll-Rand synthetic compressor lubricant and 60% continuous duty operation with the use of petroleum lubricant. In other words, synthetic lubricant allows the compressor to pump continuously without cycling. Petroleum lubricant limits the compressor to a maximum of 36 minutes of pumping time per hour. The compressor should not cycle more than 10 times per hour.
