Studies on the Teaching of Asian Languages in the 21st Century Hüseyin İçen, Seniye Vural, 2014-03-26 In recent years there has been an increasing demand for and rapid development in the learning and teaching of Asian languages as a foreign language throughout the world. Many governments recognize that Asian languages are of strategic economic importance and thus they are now offered as a foreign language by a great number of schools and higher education institutions. This book contains chapters written by different authors from several countries on key issues and problems in the teaching of the Chinese, Russian, Farsi, Japanese and Malaysian languages and some comparative studies. The contributors here explore future directions in the teaching of Asian languages in the 21st century. The ten chapters of the book have been prepared by the authors using the scholarly papers they presented at the Second International Symposium on Asian Languages and Literatures ADES which was held on 3-4 May 2012 at Erciyes University, Kayseri, Turkey, under the title of Teaching of Asian Languages in the 21st Century.

MasterClass in History Education Christine Counsell, Katharine Burn, Arthur Chapman, 2016-10-06 MasterClass in History Education draws on international research and practice to present effective and engaging approaches for history teachers who want to explore the ways in which reading, research and reflection can support the development of history teaching and learning in the classroom. At the heart of the book is a series of professional enquiries carried out by experienced history teachers working in a range of contexts. Each history teacher addresses clear questions arising from their practice and together they illustrate various approaches to data collection, data analysis and argument. These history teachers also show how they drew on diverse scholarship in history and history education including many publications by other history teachers. In eight further chapters, other experts ranging from practitioner scholars to researchers in diverse fields such as history, history education, teacher education, teacher research and curriculum theory reflect on the distinctive insights that these teachers offer and explore connections with their own fields. The combination of perspectives and the depth of knowledge of the varied contributors reveal the importance of different kinds of relationship between theory and practice. The links between classroom realities and research and the critical use of different kinds of text will support history teachers in developing their practice and professional voice.

The Life and Death of Secondary Education for All Richard Pring, 2013-05-07 Is there life after death for secondary education This book focuses upon the quality of learning Reform so called too often begins with qualifications examinations institutional provision paths of progression All those are very important but their value lies in the support they give to learners and their learning in its different forms One needs to start with the aims of education and then with what it means to learn practically theoretically morally and with the very many different needs of the learners That is what this book aims to do In so doing it will be both philosophical in analysis and empirical in example So much is happening from down below that goes unrecognised by policy makers But innovations too often get hampered by government interventions by a bureaucratic mentality and by failure to spread good practice The general argument of the book therefore will be illustrated throughout with detailed references to practical developments in schools colleges the third sector youth work independent training providers and professional bodies across several countries The book builds on Education for All which was based on 14 19 research into secondary education this book transcends the particularities of England and Wales and digs more deeply into those issues which are at the heart of educational controversy policy and practices and which survive the transience of political change and

controversy The issues the aims of education standards of performance the consequent vision of learning the role of teachers progression from school to higher or further education and into employment the provision of such education and training and the control of education are by no means confined to the UK or to this day and age Pring identifies similar problems in other countries such as the USA Germany and France and indeed in the Greece of Plato and Aristotle and offers solutions with a comparative perspective It is a critical time Old patterns of education and its provision are less and less suitable for facing the twenty first century The patterns and modes of communication have changed radically in a few years and those changes are quickening in pace The economic context has been transformed affecting the skills and knowledge needed for employment The social world of young people raises fresh demands hopes and fears A global recession has affected young people disproportionately making quality of life and self fulfilment ever more difficult to attain In addressing learning and the learners first and foremost the book will argue for a wider vision of learning and a more varied pattern of provision Old structures must give way to new
