EXAMPLE

Explain why Dean could use the Triangle Midsegment Theorem to measure the length of the lake.

Solution: To find the length of the lake, Dean starts at the end of the lake and paces straight along that end of the lake. He counts the number of strides (35). Where the lake ends, he sets a stake. He paces the same number of strides (35) in the same direction and sets another stake. The first stake marks the midpoint of one side of a triangle.

Dean paces from the second stake straight to the other end of the lake. He counts the number of his strides (236).
