toughness of ductile materials using the experimentally measured biaxial fracture strain Provides new equations to calculate the yield and ultimate stresses of copper and titanium alloys using measured SPT data Explores functions to correlate the load displacement data of p SPT specimens with fracture properties Includes case studies with direct relevance to the degradation of plant materials This book is aimed at researchers professionals and graduate students in materials science and engineering mechanical property characterization and testing and small scale experimentation It is expected that the advanced methodology presented in this book to evaluate changes in the properties of aged materials during the service life using SPT data are useful to designers for safety evaluation and also to calculate the remaining service life of industrial components for life extension studies
