

■ Deadlock Recovery

- Recovery through preemption
 - It may be possible to take a resource away from a process and give it to another
 - This may require manual intervention (ie: go to the printer and remove the sheets printed so far so as not to group them with the output from the other process)
 - This method is highly dependent on the nature of the resource – frequently difficult or impossible (writing to a database but only half done...can you really interrupt this?)
