How do substances move in and out of cells?

Why?

An advertisement for sports drinks, such as Gatorade, Powerade, and Vitaminwater, etc. seem to be everywhere. All of these drinks are supposed to help your body recover and replenish lost electrolytes, fluids, and vitamins after exercise. But how do the essential molecules contained in these drinks get into your cells quickly to help you recover after exercise?

Model 1 – Simple Diffusion

- How many different types of molecules are shown in Model 1? **Two**
- Count and record the number of triangles and circles found on each side of the membrane.
Triangles — 14 on left, none on right; Triangles — 14 on left, none on right
- Which shape is larger? **Triangle**
- Describe the direction of the movement of the molecules in Model 1? **Triangle**
- Which molecules are able to pass through the semi-permeable membrane? Justify your answer.
The dots, because they are small and can fit through the gaps, and because they are shown equally distributed on both sides of the membrane

The Membranes of Cells Philip Yeagle, 1993 In

this new edition of *The Membranes of Cells* all of the chapters have been updated some have been completely rewritten and a new chapter on receptors has been added The book has been designed to provide both the student and researcher with a synthesis of information from a number of scientific disciplines to create a comprehensive view of the structure and function of the membranes of cells The topics are treated in sufficient depth to provide an entry point to the more detailed literature needed by the researcher Key Features Introduces biologists to membrane structure and physical chemistry Introduces biophysicists to biological membrane function Provides a comprehensive view of cell membranes to students either as a necessary background for other specialized disciplines or as an entry into the field of biological membrane research Clarifies ambiguities in the field

Mammalian Cell Membranes G. A. Jamieson, D. M. Robinson, 2014-05-20 *Mammalian Cell Membranes Volume 1 General Concepts* is a collection of papers that deals on the physical and chemical studies focusing on membrane structure and function This collection reviews the interpretation of the anatomy of the mammalian cell including its separation and cultivation The different methods of isolation of its surface membrane are then evaluated to bring some understanding of the subject More descriptions of the various physical techniques adopted to membrane constituents and to cell membrane research such as nuclear magnetic resonance electron spin resonance fluorescence and flash photolysis spectroscopy are given Discoveries of mitochondrial DNA and other techniques have increased investigation of the synthesis and components of functional mitochondria leading to different perspectives on models of membrane structure This book can serve the needs of biochemists and microbiologists in advancing their work research and understanding of mammalian cell membranes

Biological Membranes Roger Harrison, 2013-11-22 to the Second Edition RESEARCH INTO MEMBRANE ASSOCIATED PHENOMENA HAS EXPANDED VERY greatly in the five years that have elapsed since the first edition of *Biological Membranes* was published It is to take account of rapid advances in the field that we have written the present edition There is now general acceptance of the fluid mosaic model of membrane structure and of the chemiosmotic interpretation of energetic processes and our attention has shifted from justifying these ideas to explaining membrane functions in their terms Much more information has become available concerning the role of the plasma membrane in the cell's recognition of and response to external signals and this is reflected in the increased coverage of these topics in the book The general form of the book remains the same As before a list of suggested reading sub divided by chapter is provided and this has been expanded to include a greater proportion of original papers The book is still primarily designed as an advanced undergraduate text and also to serve as an introduction for post graduate workers entering the field of membrane research We have taken cognizance of the comments of many reviewers colleagues and students on the first edition and thank them for their contributions In particular we wish to acknowledge our colleagues R Eistenthal G D Holman D W Hough and A H Rose Dr C R
