Computational Materials Science Kaoru Ohno,Keivan Esfarjani,Yoshiyuki Kawazoe,2012-12-06 There has been much progress in the computational approaches in the field of materials science during the past two decades In particular computer simulation has become a very important tool in this field since it is a bridge between theory which is often limited by its oversimplified models and experiment which is limited by the physical parameters Computer simulation on the other hand can partially fulfill both of these paradigms since it is based on theories and is in fact performing experiment but under any arbitrary even unphysical conditions This progress is indebted to advances in computational physics and chemistry Ab initio methods are being used widely and frequently in order to determine the electronic and or atomic structures of different materials The ultimate goal is to be able to predict various properties of a material just from its atomic coordinates and also in some cases to even predict the stable atomic positions of a given material However at present the applications of ab initio

methods are severely limited with respect to the number of particles and the time scale of dynamical simulation This is one extreme of the methodology based on very accurate electronic level calculations *African Journal of Educational Research*, 1975 **Papers in ITJEMAST 11(12) 2020**, International Transaction Journal of Engineering Management Applied Sciences Technologies publishes a wide spectrum of research and technical articles as well as reviews experiments experiences modelings simulations designs and innovations from engineering sciences life sciences and related disciplines as well as interdisciplinary cross disciplinary multidisciplinary subjects Original work is required Article submitted must not be under consideration of other publishers for publications **London, Edinburgh and Dublin Philosophical Magazine and Journal of Science**, 1911 The London, Edinburgh and Dublin Philosophical Magazine and Journal of Science, 1922 *Metadata and Semantics Research* Emmanouel Garoufallou, Richard J.
