

The Global Assessment of Functioning (GAF) is a numeric scale (0 through 100) used by mental health clinicians and physicians to subjectively rate the social, occupational and psychological functioning of adults, e.g., how well or adaptively one is meeting various problems-in-living. It excludes physical and environmental impairment. The scale is presented and described in the DSM-IV-TR on page 32. Children and adolescents under the age of 18 are evaluated on the Children's Global Assessment Scale, or C-GAS.

Code	Description of Functioning
91 - 100	Superior functioning in a wide range of activities, life's problems never seem to get out of hand, is sought out by others because of his/her many positive qualities. No symptoms.
81 - 90	Absent or minimal symptoms, good functioning in all areas, interested and involved in a wide range of activities. Socially effective, generally satisfied with life, no more than everyday problems or concerns (e.g., an occasional argument with family members).
71 - 80	If symptoms are present, they are transient and expectable reactions to psycho-social stressors (e.g., difficulty concentrating after family argument); no more than slight impairment in social, occupational, or school functioning (e.g., temporarily falling behind in schoolwork).
61 - 70	Some mild symptoms (e.g., depressed mood and mild insomnia) or some difficulty in social, occupational, or school functioning (e.g., occasional truancy, or theft within the household), but generally functioning pretty well, has some meaningful relationships.
51 - 60	Moderate symptoms (e.g., flat affected speech, some panic attacks) or moderate difficulty in social, occupational, or school functioning (e.g., few friends, conflicts with or co-workers).
41 - 50	Serious symptoms (e.g., suicidal ideation, obsessional rituals, frequent shoplifting) or any serious impairment in social, occupational, or school functioning (e.g., unable to keep a job).
31 - 40	Some impairment in reality testing (e.g., speech is at times illogical, obscure, or irrelevant) or major impairment in several areas, such as work or school, family relations, judgment, thinking, or mood (e.g., depressed man avoids friends, neglects family, and is unable to work; child frequently beats up younger children, is defiant at home, and is failing at school).
21 - 30	Behavior is considerably influenced by delusions or hallucinations or serious impairment in communication or judgment (e.g., sometimes incoherent, acts grossly inappropriately, suicidal preoccupation) or inability to function in almost all areas (e.g., stays in bed all day; no job, home or friends).
11 - 20	Some danger of harm to self or others (e.g., suicidal attempts without clear expectation of death; frequent violent; manic excitement) or occasionally fails to maintain minimum personal hygiene (e.g., smears feces) or gross impairment in communication (e.g., largely incoherent or mute).
1 - 10	Persistent danger of severely hurting self or others (e.g., recurrent violence) or persistent inability to maintain personal hygiene or serious suicidal act with clear expectation of death.

Note: This version of the GAF scale is intended for **academic use** only. Although it is based on the clinical scale presented in the DSM – IV TR, this summary lacks the detail and specificity of the original document. The complete GAF scale on page 32 of the DSM - IV should be consulted for clinical use.

Handbook of Positive Psychology C. R. Snyder,Shane J. Lopez,2001-12-20 Psychology has long been enamored of the dark side of human existence rarely exploring a more positive view of the mind What has psychology contributed for example to our understanding of the various human virtues Regrettably not much The last decade however has witnessed a growing movement to abandon the exclusive focus on the negative Psychologists from several subdisciplines are now asking an intriguing question What strengths does a person employ to deal effectively with life The Handbook of Positive Psychology provides a forum for a more positive view of the human condition In its pages readers are treated to an analysis of what the foremost experts believe to be the fundamental strengths of humankind Both seasoned professionals and students just entering the field are eager to grasp the power and vitality of the human spirit as it faces a multitude of life challenges The Handbook is the first systematic attempt to bring together leading scholars to give voice to the emerging field of positive

psychology *Posttraumatic Stress Disorder in Litigation* Robert I. Simon, 2008-08-13 The terrorist attacks on the World Trade Center in September 2001 turned PTSD into a household word But posttraumatic stress disorder has been documented throughout history For example as long ago as 1666 Samuel Pepys wrote in his diary that he still had night terrors 6 months after the great fire of London PTSD officially recognized as a diagnosis by DSM III in 1980 is only the most recent term used to describe the suffering of trauma victims Few could have foreseen its profound impact on litigation Often dubbed the black hole of litigation where allegations are relatively easy to assert but difficult to defend because the symptoms are subjective PTSD has deeply influenced civil and criminal law in cases ranging from malpractice and personal injury to sexual harassment and child abuse It is thus vital for all legal parties involved that forensic examiners perform credible psychiatric and psychological examinations of PTSD claimants Intended to add direction and discipline to the forensic assessment of PTSD litigants this expanded second edition begins with an updated chapter on current and future trends for the role of PTSD in litigation Chapter 2 notes the increasing evidence that exposure to multiple events not only is more common than previously thought but also increases the risk for development of PTSD following the target event Chapter 3 details diagnostic criteria and guidelines for the forensic psychiatric examination of the PTSD claimant Most literature discusses PTSD in adults Chapter 4 offers a rare perspective on PTSD in children and adolescents including parental response to the trauma developmental effects and delayed onset symptoms Forensic assessment of PTSD claimants is presented in Chapter 5 followed by new chapters on disability determinants how PTSD impairs occupational functioning and PTSD in the workplace where the causal relationship between employment stress and a resulting mental or emotional disorder must be determined Chapter 8 covers guidelines for malingering in PTSD where the claimant may be motivated by financial gain or by a reduced charge resulting from an insanity defense A new chapter on forensic laboratory testing in PTSD presents the tantalizing potential of psychophysiological measurement to redeem the PTSD diagnosis from its daunting subjectivity This essential collection by 13 U S experts sheds important new light on forensic guidelines for effective assessment and diagnosis and determination of disability serving both plaintiffs and defendants in litigation involving PTSD claims Mental health and legal professionals third party payers and interested laypersons will welcome this balanced approach to a complex and difficult field *Clinician's Guide to Psychological Assessment and Testing* John M. scientific advances including new measures and diagnostic approaches have led to dramatic growth in the field. The editors of this exciting new work have assembled an extraordinary collection of chapters that thoroughly discuss the conceptualizations of dysfunction in infants and young children, current and new diagnostic criteria, and such specific disorders as sensory modulation dysfunction, sleep disorders, eating and feeding disorders, autistic spectrum disorders, anxiety disorders, posttraumatic stress disorder, and ADHD. Chapters further highlight the importance of incorporating contextual factors such as parent-child relationship functioning and cultural background into the assessment process to increase the validity of findings. Given the comprehensiveness of this groundbreaking volume in reviewing conceptual, methodological, and research advances on early identification, diagnosis, and clinical assessment of disorders in this young age group, it will be an ideal resource for teachers, researchers, and a wide variety of clinicians including child psychologists, child psychiatrists, early intervention providers, early special educators, social workers, family physicians, and pediatricians.
