**Global Warming and Global Cooling** O.G. Sorokhtin, Leonid F. Khilyuk Ph.D., G.V. Chilingarian, 2007-08-24 The theory of the Earth s climate evolution based on universal chemical physical laws of matter energy transformation is presented in the book It shows how the process of Earth s core separation has led to formation and evolution of the hydrosphere and atmosphere Having analyzed the processes of heat transfer in the atmosphere the writers developed the adiabatic theory of the greenhouse effect which was applied for analysis of climatic changes on the Earth The influence of changes in climate on formation of mineral deposits and development of life on Earth was considered and presented based on modeling of typical climatic regimes It shows that the anthropogenic effect on the Earth s global temperature is negligible in comparison with the effect of global forces of nature Presents the theory of Earth s evolution based on the laws of chemical density differentiation of the origin of the Earth Discusses the adiabatic theory of the greenhouse effect with quantitative estimates of the natural and anthropogenic influences on Earth s climates Describes the quantitative description of the evolution of the Earth s climate throughout geologic history and prediction of the future of the Earth s climate Investigates the global forces of nature driving the Earth s climate

*Climate Intervention* National Research Council,Division on Earth and Life Studies,Ocean Studies Board,Board on Atmospheric Sciences and Climate,Committee on Geoengineering Climate: Technical Evaluation and Discussion of Impacts,2015-06-23 The growing problem of changing environmental conditions caused by climate destabilization is well recognized as one of the defining issues of our time The root problem is greenhouse gas emissions and the fundamental solution is curbing those emissions Climate geoengineering has often been considered to be a last ditch response to climate change to be used only if climate change damage should produce extreme hardship Although the likelihood of eventually needing to resort to these efforts grows with every year of inaction on emissions control there is a lack of information on these ways of potentially intervening in the climate system As one of a two book report this volume of Climate Intervention discusses albedo modification changing the fraction of incoming solar radiation that reaches the surface This approach would deliberately modify the energy budget of Earth to produce a cooling designed to compensate for some of the effects of warming associated with greenhouse gas increases The prospect of large scale albedo modification raises political and governance issues at national and global levels as well as ethical concerns Climate Intervention Reflecting Sunlight to Cool Earth discusses some of the social political and legal issues surrounding these proposed techniques It is far easier to modify Earth s albedo than to determine whether it should be done or what the consequences might be of such an action One serious concern is that such an action could be unilaterally undertaken by a small nation or smaller entity for its own benefit without international sanction and regardless of international consequences Transparency in discussing this subject is critical In the spirit of that transparency Climate Intervention Reflecting Sunlight to Cool Earth was based on peer reviewed literature and the judgments of the authoring committee no new research was done as part of this study and all data and information used are from entirely open sources By helping to bring light to this topic area this book will help leaders to be far more

knowledgeable about the consequences of albedo modification approaches before they face a decision whether or not to use them
