## **Global Energy Demand And 2 Degree Target Report 2014:**

Global Energy Demand and 2-degree Target, Report 2014 Valentin Crastan, 2014-11-22 This report takes a neutral and independent point of view in attempting to show concrete ways to achieve the goal of reducing CO<sub>2</sub> emissions and limiting global warming to the 2 degree target It presents an overall picture spanning all key countries In the report the temporal evolution of the main parameters is given from 1970 to 2011 for all regions of the world and all G 20 countries starting from the basic data gross domestic consumption The parameters are then extrapolated to 2030 taking into account current trends local factors and the requirements of the 2 degree climate target An important basis is the structure of the current energy consumption and energy flows of all regions of the world and all G 20 countries which is analyzed in the appendix in detail and reproduced as clearly as possible The reports from climate science make it clear that with a greater level of warming adaptation is the more expensive option Compliance with the 2 degree climate target is a challenge but not impossible The book is intended not only for the scientific community but also for decision makers in government and industry **Springer**

*Community Action and Climate Change* Jennifer Kent, 2015-11-19 The failure of recent international negotiations to progress global action on climate change has shifted attention to the emergence of grassroots sustainability initiatives These civil society networks display the potential to implement social innovation and change processes from the bottom up Recent scholarship has sought to theorise grassroots community based low carbon practices in terms of their sustainability transition potential However there are few empirical examples that demonstrate the factors for success of community based social innovations in achieving more widespread adoption outside of their local sustainability niche The book seeks to address two significant gaps related to grassroots climate action firstly the continuing dominance of the individualisation of responsibility for climate change action which presupposes that individuals hold both the ability and desire to shift their behaviours and lifestyle choices to align with a low carbon future Secondly the potential for community based collectives to influence mainstream climate change governance an area significantly under researched Drawing on empirical research into Australian Climate Action Groups CAGs and related international research the book argues that grassroots community based collective action on climate change holds the key to broader social change This book will be of great interest to students and scholars of climate change citizen participation environmental sociology and sustainable development      **Technical report**
