Stylianou, Maria L. Blanton, Eric J. Knuth, 2010-09-23 A Co-Publication of Routledge for the National Council of Teachers of Mathematics (NCTM). In recent years, there has been increased interest in the nature and role of proof in mathematics education, with many mathematics educators advocating that proof should be a central part of the mathematics education of students at all grade levels. This important new collection provides that much-needed forum for mathematics educators to articulate a connected K-16 story of proof. Such a story includes understanding how the forms of proof, including the nature of argumentation and justification, as well as what counts as proof, evolve chronologically and cognitively, and how curricula and instruction can support the development of students' understanding of proof. Collectively, these essays inform educators and researchers at different grade levels about the teaching and learning of proof at each level and thus help advance the design of further empirical and theoretical work in this area. By building on and extending existing research and by allowing a variety of voices from the field to be heard, *Teaching and Learning Proof Across the Grades* not only highlights the main ideas that have recently emerged on proof research but also defines an agenda for future study. **Resources in Education**, 2001-10 *Science Test Practice, Grade 8* Spectrum, 2006-10-01 Spectrum Science Test Practice Grade 8 helps students improve and strengthen their test-taking skills as they learn strategies for responding to a variety of test questions, techniques for interpreting data, and skills necessary for observing and investigating science concepts and processes. **Handbook of Learning Disabilities, Second Edition** H. Authoritative and up-to-date, the book also examines the concepts and methods that guide learning disability research and identifies promising directions for future investigation. **Metacognition in Science Education** Anat Zohar, Yehudit Judy Dori, 2011-10-20 Why is metacognition gaining recognition both in education generally and in science learning in particular?
