International Journal Of Scientific Research:

International Handbook of Research in History, Philosophy and Science Teaching Michael R. Matthews, 2014-07-03 This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical curricular and pedagogical issues in the teaching of science and mathematics. It is contributed to by 130 researchers from 30 countries; it provides a logically structured, fully referenced guide to the ways in which science and mathematics education is informed by the history and philosophy of these disciplines as well as by the philosophy of education more generally. The first handbook to cover the field, it lays down a much needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject. The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education, attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects. There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science; this handbook is uniquely positioned as a locus for the discussion. The handbook features sections on pedagogical, theoretical, national and biographical research, setting the literature of each tradition in its historical context. It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching, and that lessons can be learnt from these engagements for the resolution of current theoretical, curricular and pedagogical questions that face teachers and administrators. Science educators will be grateful for this unique encyclopaedic handbook. Gerald Holton, Physics Department, Harvard University. This handbook gathers the fruits of over thirty years' research by a growing international and cosmopolitan community. Fabio Bevilacqua, Physics Department, University of Pavia.

Higher Education and Scientific Research in the Arabian Gulf States Abdellatif Sellami, Khalid Arar, Rania Sawalhi, 2022-11-29 This book takes a closer look at the relation between current issues and trends in higher education and scientific research in the Arab World and in the Gulf Cooperation Council (GCC) states of Qatar and United Arab Emirates (UAE). This thoroughly researched text traces the development of higher education in the GCC area as it continues to be positioned in an intersection of international and local factors. The text further articulates the pivotal political and cultural influences that act as real and perceived barriers towards the advancement of key fields. The chapters analyze the current policy trends, structures and coping alternatives in addressing higher education challenges, whilst also providing comparative first-hand texts with the other Arab states in the region. By drawing focus on the GCC area, the text identifies the crucial factors that hamper learning and research performance. The book serves as an invaluable discussion on the implications for policy makers and HEIs in relation to the eponymous regions and other Arab states in the GCC area. Enhancing understanding of the scope, scale and complexity of higher education and scientific research in the GCC area, the book will be of interest to academics, researchers and postgraduate students in the fields of educational policy, comparative and international education and higher education.
