Climate Change Adaptation Manual Andrea Prutsch, Torsten Grothmann, Sabine McCallum, Inke Schauser, Rob Swart, 2014-02-24 Due to the lack of success in climate

change mitigation efforts the importance of adaptation is becoming more and more apparent and is now one of the main imperatives of international research and action However research on adaptation is mostly not directly applicable to adaptation policy or practice leaving a gap between scientific results and practical advice for decision makers and planners This book seeks to address this problem and bridge the gap and should provide readers with practical and applicable information on climate change adaptation Following an introduction the book is organised into four main sections each reflecting an essential component in the adaptation process Climate change adaptation is an emerging subject area and has gained increased political and academic attention within the last decade Whereas most books in the field focus on adaptation in developing countries this volume provides an examination of predominantly European policy and offers inter disciplinary insight into cutting edge knowledge and lessons learnt in a relatively new field of implementation
