This file contains instructions for authors planning to submit a paper to the *Journal of Plasma Physics*. These instructions were generated in L^AT_EX using the JPP style, so the L^AT_EX source file can be used as a template for submissions. The present paragraph appears in the abstract environment. All papers should feature a single-paragraph abstract of no more than 250 words, which provides a summary of the main aims and results.

1. How to submit to the *Journal of Plasma Physics*

Authors must submit using the online submission and peer review system, ScholarOne Manuscripts (formerly Manuscript Central) at <http://mc.manuscriptcentral.com/pla>. If visiting the site for the first time, users must create a new account by clicking on register here. Once logged in, authors should click on the Corresponding Author Centre, from which point a new manuscript can be submitted, with step-by-step instructions provided. Authors must at this stage specify the type of paper submitted: original article or review (see §5 for more details). Once your submission is completed you will receive an email confirmation.

Alternatively, authors can use the JPP template in the online collaborative authoring tool, Overleaf (<https://www.overleaf.com/latex/templates/latex-template-for-journal-of-plasma-physics-jpp/mstpytyllvy>). Overleaf has an intuitive interface that helps authors to format the article in the JPP style. It also has features that enable collaboration with co-authors (the ability to share, highlight and comment), sophisticated version control and clean PDF version conversion. The Submit button in Overleaf takes authors smoothly through to the ScholarOne Manuscripts system.

2. ORCID

JPP strongly encourages all corresponding authors to identify themselves using ORCID when submitting a manuscript to the journal. ORCID provides a unique identifier for researchers and, through integration in key research workflows such as publication and grant applications, provides the following benefits:

(i) Discoverability: ORCID increases the discoverability of your publications, by enabling smarter publisher systems and by helping readers to reliably find work that you've authored.

(ii) Convenience: As more organisations use ORCID, providing your ID or using it to register for services will automatically link activities to your ORCID profile, and will save you re-keying information multiple times.

The Papers of Thomas Jefferson, Volume 22 Thomas Jefferson, 2018-06-05 The months covered by this volume illustrate the variety of topics characteristic of the Jefferson Papers. Subjects range from Jefferson's continued overseeing of the planning of the Federal District that became Washington D C to his worries over his debts and his exchange of correspondence with the free black Benjamin Banneker. This period, an unusually significant time for Jefferson as Secretary of State, saw the opening of a new phase of diplomacy. When Jefferson returned to the capital after a stay at Monticello in the fall, the first British minister to the United States had arrived and the new representative from France had been in the city since August. During this time, Jefferson began keeping private notes on important political conversations, notes that he later collected and bound. These notes were published after his death as Jefferson's *Anas*, a work never closely examined until now and often extended beyond Jefferson's evident intention. Ascertaining that Jefferson collected and intended only those documents from his tenure as Secretary of State to be used to challenge the Federalist interpretation of Washington's administration, the present editors publish the *Anas* notes not as compiled late in Jefferson's life or as amplified by others but in chronological order in the context in which they were written. Also discovered during the preparation of this volume was a new, later date for that portion of Jefferson's famous *Espistolary Record* written in his own hand.

The Physics of Nanoelectronics Tero T. Heikkilä, 2013-02-01 Advances in nanotechnology have allowed physicists and engineers to miniaturize electronic structures to the limit where finite size related phenomena start to impact their properties. This book discusses such phenomena and models made for their description. It also describes how to treat fluctuations and correlations, how interactions affect transport through small islands, and how superconductivity

modifies these effects The last two chapters describe new emerging fields related with graphene and nanoelectromechanics The focus of the book is on the phenomena rather than formalism but the book still explains in detail the main models constructed for these phenomena It also introduces a number of electronic devices including the single electron transistor the superconducting tunnel junction refrigerator and the superconducting quantum bit **Social Psychiatry in South Asia** S.
