**Competitiveness Creation and Maintenance in the Postal Services Industry** Vaida Pilinkienė, Vilma Deltuvaitė, Asta Daunorienė, Vaidas Gaidelys, 2016-07-01 This book examines the changing business and economic environment for postal services in Lithuania and the upcoming challenges for this industry Postal services continue to play a central part in the development of national economies However the economic and social role of postal services has changed rapidly and fundamentally over the last two decades In most industrialized countries paper based communications are in serious decline while the demand for parcel delivery services is rising steadily with the continuing development of e commerce just in time production techniques and global supply chains For the postal sector as a whole the centre of gravity has shifted dramatically from letters and documents to parcels The authors explain how the organizational paradigm has inexorably shifted from that of a national government owned postal administration providing the basic delivery services required by society to a system of interdependent local and regional undertakings that both compete and cooperate with one another The book argues that there are no indications that the postal sector has stopped changing and that it seems most probable that the European Union's postal sector will look quite different in 2035 than it does today In closing the book explains how the shareholders of postal services companies have recently confirmed that the time has come to rethink the strategy of creating and maintaining competitiveness in the postal services industry *OECD Development Pathways Multi-dimensional Review of Kazakhstan Volume 2. **Systems Medicine For Human Spaceflight** Mark J Shelhamer,Erik Antonsen,2024-03-19 This edited volume makes the case that a systems approach is needed for long term spaceflight missions Due to distance from Earth and the impossibility of resupply or rapid return these flights will entail unprecedented autonomy on the part of the crew This autonomy includes the need for local clinical decision support and other assistance with urgent medical concerns The advantage of a systems approach to medical needs in human spaceflight is that it enables a systematic and repeatable methodology for identifying and developing the individual pieces of the spacecraft systems based on the human system needs that are unique to that problem and environment The book begins by introducing a systems basis for thinking about humans in space It describes existing models and paradigms of systems medicine as well as the tools and analytical approaches involved A tantalizing peek at preliminary applications of systems medicine in NASA is provided As systems in human spaceflight continue to evolve for the foreseeable future it is argued that a systems approach will help to ensure that the evolution of the relevant sub systems is centered on optimal human system function across the unique spaceflight needs of the developing customer base The discussions on balancing the needs of the mission versus the maintenance of crew health medical risk and liability for commercial spaceflights and the need to anticipate what the next medical issues might be will hopefully leave readers cautiously optimistic about this new frontier of applied science
