Resources in Education ,1998 *The enforceability of the human right to adequate food* Bart Wernaart,2023-09-04

While the right to adequate food is often discussed in the context of developing countries especially in situations where access to adequate food is a problem on a larger scale this book focusses on the right to food in two Western countries in which theoretically the circumstances allow this right to be enjoyed by each individual Through a legal comparative study the enforceability of the right to food is compared between the Netherlands and Belgium in light of the current UN Human Rights system There seems to be a difference between what the countries do what they say they do and what they should do on the matter As it appears the coincidental constitutional circumstances mainly determine the enforceability of the right to food rather than the content of the human right in itself This book includes a thorough analysis of suitable comparative legal methodology and the embedment of the right to food in the UN human right system Furthermore for both countries an in depth analysis of the case law on the right to food mostly concerning the status of foreigners the constitutional context in which the Judiciary operates and the relevant UN reports and subsequent procedures are outlined Finally recommendations are made to both countries and the relevant UN Committees *Legal Theory, Sources of Law and the Semantic Web*

Alexander Boer,2009 Attempts to construct an integrated conceptual framework for the application neutral and problem neutral representation of sources of law using Semantic Web technology and concepts and some technically straightforward extensions to Semantic Web technology based on established practices found in fielded applications *Dissertation Abstracts* ,1969 Intermediate Quantities Philip Peterson,2018-01-12 This title was first published in 2000 Intermediate quantifiers express logical quantities which fall between Aristotle s two quantities of categorical propositions universal and particular Few many and most express the most commonly referred to intermediate quantifiers but this book argues that an infinite number can be understood through a deeper examination of the logical nature of all intermediate quantifiers Presenting and analyzing the logical and linguistic features of intermediate quantifiers in a fashion typical of traditional logic Philip L Peterson presents an account integrating the logic and semantics of intermediate quantifiers with the two traditional quantities by traditional methods Having introduced the basic idea of how to approach the task in the first chapter with heavy emphasis on the linguistic meanings and ordinary uses of English intermediate quantifier expressions Peterson then undertakes the task of completely integrating the three basic intermediate quantities into traditional logic in the following chapter Drawing on the work of Robert Carnap and taking a critical look at James McCawley s grammatical analysis the author then provides rather revisions extensions and explorations into logical inference linguistic meaning algebraic methods and rules of infinite quality syllogism to reach the conclusion that a new approach to foundations of mathematics based on the syllogistic logic of quantifiers is possible to produce a new explanation of classical distribution and an extension of infinite quantity syllogistic to relations Considerable attention has been paid over the years to generalized quantifiers and

this completion of an explanation for extending traditional syllogistic logic to handle intermediate quantifiers offers insights for those studying across areas of logic linguistics and the philosophy or semantics of natural language

Mathematical Reviews ,1999 Efficiency and Equity in Welfare Economics Pier Carlo Nicola,2012-08-31 Increasing efficiency in generating national income and improving equity in its distribution among economic agents is at the forefront of priorities of most modern economies This book presents a model which aims to maximize a symmetrical welfare function under certain constraints which consider both efficiency and equity i e taxes and subsidies implemented by a public authority The model is numerically implemented and considers a set of economic agents with starting incomes that satisfy Pareto income law under various values of the alpha parameter Also the model implementations respect the social production function Various experiments are presented which show how income inequality measured by means of the Lorenz curve and what I call the Lorenz Gini inequality index and measures of poverty are sensibly reduced by redistributing national income without lowering efficiency in production A case study or application of Italian personal income in 2008 is also presented
