Science Sifting: Tools For Innovation In Science And Technology

Janice M Dietert, Rodney R Dietert, 2013-05-20 Science Sifting is designed primarily as a textbook for students interested in research and as a general reference book for existing career scientists. The aim of this book is to help budding scientists broaden their capacities to access and use information from diverse sources to the benefit of their research careers. The book describes why the capacity to access and integrate both linear and nonlinear information has been an important historic feature of pivotal scientific breakthroughs. Yet it is a process that our students are rarely if ever taught in universities. This book goes beyond simply describing the features of great scientific breakthroughs. It discusses the basis for accessing and using nonlinear information in the linear research context. It also provides a series of tools and exercises that can be used to enhance access to nonlinear information for application to research and other endeavors. Topics covered include focal points in scientific breakthroughs, the use of concepts maps in research, use of different vantage points, information as patterns, fractals for the scientist, memory storage and access points, and synchronicities. Young researchers need useful tools to help with a more holistic approach to their research careers. This book provides the useful tools to support flexibility and creativity across a long term research career. Roald Hoffmann, Winner of the 1981 Nobel Prize in Chemistry, has contributed to the Science Sifting. More information on Professor Hoffmann can be found at

Computer-Mediated Learning for Workforce Development

Mentor, Dominic, 2018-06-08 Technology has become a driving force of innovation in every industry and professionals need to strengthen their proficiency in emerging technologies to remain competitive. Today's working world is very demanding of young professionals as recent graduates are expected to come into their chosen field both knowledgeable and ready to hit the ground running with minimal on the job training. Computer Mediated Learning for Workforce Development delivers crucial knowledge on how to prepare twenty-first century students for today's fast-paced workforce. This book explores the use of multimedia programs in classrooms to train students on necessary technology skills through techniques such as game-based training, curriculums, and massive open online courses (MOOCs). This publication also touches on computer-mediated youth civic action and interaction by examining the use of social media during the Arab Spring, Occupy Wall Street, and Black Lives Matter movements. Filled with critical information on educational technology, mobile learning, and employment preparation, this book is a vital resource for academicians, education practitioners, school administrators, and advanced-level students.
