

How to spot a FAKE ID

Look for these security features on ID cards

Fine-line or guilloche pattern

A pattern of continuously fine lines constructed by using two or more lines in overlapping bands that repeat a lacy, web-like curve.

Ghost image

Half-tone reproduction of the original image that is typically printed in the same area as, and behind, personal data.

Laser engraving

Information that cannot be mechanically or chemically removed without surface damage to the card. Can be used for photos, characters, bar codes, OCR, etc.

Laser perforation

Holes made with a laser beam to form images or objects. Image is visible when held up to a light source. It has tactile feel with conical holes that are larger at the entrance than exit.

Overlapping data

Variable data, such as digitized signature, seal, or text that can be placed over another field such as a photo image. Both fields must be altered to make a fake.

Overlay

An ultra-thin film or protective coating that may be applied to the surface of a card in place of a security laminate and which may contain optically variable features.

Tactile feature

A feature that is apparent to touch or feel without the use of a special instrument. This could include texture, flexibility, or weight of the document.

Transparent image

See-through, window-like feature visible from both sides of a document.

Laser embossing

The unique use of a laser to emboss an image or data to rise only on one side of the card material.

Rainbow printing

Must demonstrate a controlled exacting color shift subtly in a continuous linear fashion.

Opacity mark

Similar to a watermark. It is a plastic that contains a unique translucent mark.

Variable laser image

Laser-engraved image with tilting effect incorporated in plastic cards: images are engraved at different angles through an array of cylindrical lenses embossed into the surface of the card. Angle of view effects a change.
