

Based off of your notes.....
 With the Orange wire #6 on the R terminal of the junction block and I post of the solenoid and Yellow wire #4 connected to the S terminal of the solenoid and push button there is no voltage between the 2 small posts with switch turned off.

When the switch is turned on I got 12V's between the 2 posts.

If I take wire #4 off of the push button and touch it to the R terminal on the junction block it will not crank over with the switch off, but it does crank over if I touch it to the L terminal.

If I move the Orange wire #6 from the R terminal on the junction block to the L and take the Yellow wire #4 off the push button and touch to the R or L terminal it will crank over.
