**How the Brain Processes Multimodal Technical Instructions** Dirk Remley, 2016-12-05 While Aristotle acknowledges the connection between rhetoric biology and cognitive abilities scholarship continues to struggle to integrate the fields of rhetoric and neurobiology. Drawing on recent work in neurorhetoric this book offers a model that integrates multimodal rhetorical theory and multisensory neural processing theory pertaining to cognition and learning. Using existing theories from multimodal rhetoric and specific findings from neurobiological studies the author develops a model that integrates concepts from both fields bridging if not uniting them. He also discusses possible applications of the new model with specific case studies related to training and instruction. These applications include various media used in instructional and training contexts such as print slide shows videos simulations and hands on training. The book thus introduces concepts of cognitive neuroscience to multimodal rhetorical theory and facilitates theorization combining multimodal rhetoric and multisensory cognition and serves as a vehicle by which readers can better understand the links between multimodal rhetoric and cognitive neuroscience associated with technical communication. Integrating case studies from industry and practice the text makes explicit connections between academic scholarship and workplace preparation. It also describes how interdisciplinary research can contribute to pharmaceutical research as well as the development of productive instructional materials. Rhetoric is affected by how the brain of any member of a given audience can process information. This book can promote further research qualitative and quantitative to develop a better understanding of the relationship between multimodal messages and how the brain processes such information.

Unmanned Systems Dr. Terence M. Dorn, 2021-12-02 The threat of an

attack involving an unmanned system armed with a weapon of mass destruction is a present one. With two million drones projected to be flying US skies in 2020, unmanned aircraft systems in the air domain pose a significant challenge to the nation's security. Other technological advancements such as artificial intelligence combined with unmanned systems have transformed the threat's very nature, yet the skies are not the only domain of concern. The technology is also developing rapidly in unmanned undersea and surface systems, expanding potential weapons of mass destruction delivery options. This publication is an examination of unmanned aerial systems (UAS), unmanned surface systems (USS), and unmanned undersea systems (UUS). The technological innovation that led to the global commercialization of UAS is underway with USS and UUS. Until recently, no known scholarly studies existed that examined the vulnerabilities of one sector of US critical infrastructure to attack by UAS. Until *A Phenomenological Examination of US Nuclear Power Plants to Attack by Unmanned Aerial Systems* was published late in 2020, according to the Nuclear Regulatory Commission (NRC), there had been fifty-seven UAS incursions over twenty-four US nuclear power plants in the past five years, representing one of sixteen sectors of US critical infrastructure (Gardiner, 2016; Rogoway and Trevithick, 2020; Hambling, 2020). Federal departments and organizations have largely ignored the threat potential that UAS pose despite the strategic guidance laid out in the 2017 National Security Strategy of the US. The nation's national security demands a close examination of the vulnerabilities and is immediately working to close those security gaps. This publication will focus on the emergency of new UAS capabilities and highlight the latest technologies, capabilities, and the significant national security threat implications that UAS, USS, and UUS platforms represent to US critical infrastructure.

*Cars & Parts*, 1993. [Resilience-Oriented Urban Planning](#) Yoshiki Yamagata, Ayyoob Sharifi, 2018-02-20. This book explores key theoretical and empirical issues related to the development and implementation of planning strategies that can provide guidance on the transition to climate-compatible and low-carbon urban development. It especially focuses on integrating resilience thinking into the urban planning process and explains how such an integration can contribute to reflecting the dynamic properties of cities and coping with the uncertainties inherent in future climate change projections. Some of the main questions addressed are: What are the innovative methods and processes needed to incorporate resilience thinking into urban planning? What are the characteristics of a resilient urban form and what are the challenges associated with integrating them into urban development? Also, how can the resilience of cities be measured and what are the main constituents of an urban resilience assessment framework? In addition to addressing these crucial questions, the book features several case studies from around the world investigating methodologies, challenges, and opportunities for mainstreaming climate resilience in the theory and practice of urban planning. Featuring contributions by prominent researchers from around the world, the book offers a valuable resource for students, academics, and practitioners alike.
