Transport, Engineering and Architecture Hugh Collis, 2003

Transport Engineering and Architecture is the second book in a series which explores the relationship between engineering and architecture Divided into chapters devoted to themes such as planning transport systems bridges airport and aviation this book helps today's engineers and architects meet the ongoing challenges of a fast moving and expanding business Since the nineteenth century and the arrival of mass travel the need for transport architecture has spawned some of the most

impressive structures of recent times As all forms of travel air rail road and water continue to expand the ever growing numbers of passengers and carriers moving around the world present new tests for architects and engineers The book is produced in association with Arup the largest firm of consulting engineers in the world *Handbook of Climate Change Impacts on River Basin Management* Saeid Eslamian, Mir Bintul Huda, Nasir Ahmad Rather, Faezeh A. Eslamian, 2024-08-29 Climate change not only involves rising temperatures but it can also alter the hydro meteorological parameters of a region and the corresponding changes emerging in the various biotic or abiotic environmental features One of the results of climate change has been the impact on the sediment yield and its transport These changes have implications for various other environmental components particularly soils water bodies water quality land productivity sedimentation processes glacier dynamics and risk management strategies to name a few This volume provides an overview of the fundamental processes and impacts of climate change on river basin management and examines issues related to soil erosion sedimentation and contaminants as well as rainfall runoff modeling and flood mitigation strategies It also includes coverage of climate change fundamentals as well as chapters on related global treaties and policies **Metric Handbook** Pamela Buxton, 2015-03-05 Significantly updated in reference to the latest construction standards and evolving building types Many chapters revised including housing transport offices libraries and hotels New chapter on flood aware design Sustainable design integrated into chapters throughout Over 100 000 copies sold to successive generations of architects and designers this book belongs in every design studio and architecture school library The Metric Handbook is the major handbook of planning and design information for architects and architecture students Covering basic design data for all the major building types it is the ideal starting point for any project For each building type the book gives the basic design requirements and all the principal dimensional data and succinct guidance on how to use the information and what regulations the designer needs to be aware of As well as building types the Metric Handbook deals with broader aspects of design such as materials acoustics and lighting and general design data on human dimensions and space requirements The Metric Handbook provides an invaluable resource for solving everyday design and planning problems **Transportation and Traffic Engineering Handbook** Wolfgang S. Homburger, 1982 Emphasizes the major elements of total transportation planning particularly as they relate to traffic engineering Updates essential facts about the vehicle the highway and the driver and all matters related to these three principal concerns of the traffic engineer **Transport for Suburbia** Paul Mees, 2009-12 The need for effective public transport is greater than ever in the 21st century With countries like China and India moving towards mass automobility we face the prospects of an environmental and urban health disaster unless alternatives are found It is time to move beyond the automobile age But while public transport has worked well in the dense cores of some big cities the problem is that most residents of developed countries now live in dispersed suburbs and smaller cities and towns These places usually have little or no public transport and most transport commentators have given up on the task of changing this it all seems too hard This

book argues that the secret of European style public transport lies in a generalizable model of network planning that has worked in places as diverse as rural Switzerland the Brazilian city of Curitiba and the Canadian cities of Toronto and Vancouver It shows how this model can be adapted to suburban exurban and even rural areas to provide a genuine alternative to the car and outlines the governance funding and service planning policies that underpin the success of the world s best public transport systems
