

1. Have the client perform the Weber test by placing the vibrating tuning fork on the vertex of the client's head and asking the client to indicate which ear hears the sound better. (Do not do this procedure on an older client, as it may interfere with equilibrium and cause dizziness.)	
<b>Waxing and Equilibrium Tests</b>	
1. Perform the whisper test by having the client place a finger on the tip of one ear. Whisper a two-syllable word (30.4-60.9 cm [1-2 ft] behind the client). Repeat on the other ear.	
2. Perform the Weber test by using a tuning fork placed on the center of the head or forehead and asking whether the client hears the sound better in one ear or the same in both ears.	
3. Perform the Rinne test by using a tuning fork and placing the base on the client's mastoid process. When the client no longer hears the sound, note the time interval, and move it in front of the external ear. When the client no longer hears a sound, note the time interval.	
4. Perform the Romberg test to evaluate equilibrium. With feet together and arms at the sides, close eyes for 20 seconds. Observe for swaying. (Refer to textbook, Chapters 16 and 26.)	
<b>Analysis of Data</b>	
1. Formulate nursing diagnoses (wellness, risk, actual).	
2. Formulate collaborative problems.	
3. Make necessary referrals.	

## CHAPTER POSTTEST

### Activity 1: MULTIPLE CHOICE QUESTIONS

Choose the one best answer for each of the following multiple choice questions.

1. An adult client visits the clinic and complains of tinnitus. The nurse should ask the client if he has been
- diary.
  - hypotensive.
  - taking antibiotics.
  - experiencing ear drainage.
2. An adult client tells the nurse that his 80-year-old father is almost completely deaf. After the nurse discusses the client about risk factors for hearing loss, the nurse determines that the client needs further instruction when the client says
- "There is a genetic predisposition to hearing loss."
  - "Certain cultural groups have a higher rate of hearing loss."
  - "It is difficult to prevent hearing loss or worsening of hearing."
  - "Chronic otitis media has been associated with hearing loss."

3. The nurse is planning to perform an ear examination on an adolescent client. The nurse should
- ask the client to remain standing.
  - show the client the otoscope.
  - ask the client to remove his contact lenses.
  - observe the client's response to the explanation.
4. The nurse is preparing to examine the ear of an adult client who is wearing a hearing aid. The nurse should
- ask the client to tilt the head slightly forward.
  - remove the aid before the examination.
  - use a speculum that measures 10 mm in diameter.
  - gently pull the pinna out, up, and back.
5. While assessing the ear of an adult client, the nurse observes cloudy drainage in the ear canal. The nurse should
- document the finding in the client's chart.
  - determine whether a foreign body is present in the ear.
  - assess the client for further signs of otitis media.
  - refer the client to a physician.
6. While assessing the ear of an adult client, the nurse observes that the tympanic membrane is completely immobile. The nurse should further assess the client for signs and symptoms of
- infection.
  - otitis media.
  - vestibular disorders.
  - healed perforations.
7. The nurse is planning to conduct the Weber test on an adult male client. The nurse should plan to
- strike a tuning fork and place it at the base of the client's mastoid process.
  - whisper a word with two distinct syllables to the client.
  - ask the client to close his eyes while standing with feet together.
  - strike a tuning fork and place it on the corner of the client's head or forehead.
8. The nurse has performed the Rinne test on an adult client. After the nurse has heard the bone conduction sound was heard longer than the air conduction sound, the client is most likely experiencing
- normal hearing.
  - sensorineural hearing loss.
  - conductive hearing loss.
  - mixed hearing loss.
9. The transmission of sound waves through the external ear and the middle ear is called
- perceptive hearing.
  - conductive hearing.
  - external hearing.
  - transductive hearing.
10. After examining the client's tympanic membranes, the nurse documents that the membranes are bulging with no light reflex. The nurse recognizes that there is
- acute otitis media.
  - chronic otitis media.
  - otitis externa.
  - trauma from infection.
