Django 1.0 Website Development Ayman Hourieh, 2009 Annotation Django is a high level Python web framework that was developed by a fast moving online news operation to meet the stringent twin challenges of newsroom deadlines and the needs of web developers. It is designed to promote rapid development and clean pragmatic design and lets you build high performing elegant web applications rapidly. Django focuses on automating as much as possible and adhering to the DRY Don't Repeat Yourself principle making it easier to build high performance web applications faster with less code. This book will show you how to assemble Django's features and take advantage of its power to design, develop and deploy a fully featured web site. It will walk you through the creation of an example web application with lots of code examples. Specially revised for version 1.0 of Django the book starts by introducing the main design concepts in Django. Next it leads you through the process of installing Django on your system. After that you will start right away on building your social bookmarking application using Django. Various Django 1.0 components and sub frameworks will be explained during this process and you will learn about them by example. In each chapter you will build one or more of the features that are essential in Web 2.0 applications like user management, tags and AJAX. You will also learn about good software development practices such as keeping your application secure and automating testing with unit tests.
