Compact design and high-performance scanning optimize field productivity

Latest standard for phase-based scanners

The "next-generation" Leica HDS6100 significantly reduces field costs and increases phase-based data quality for many types of as-built and site surveys where users want to take advantage of ultra-high speed, phase-based laser scanning.

Up to 508,000 points per second

The Leica HDS6100 features the fastest scan rates available for high-accuracy, as-built surveys, making it the ideal instrument when very short time windows are available for capturing High-Definition Survey™ data.

Highly portable and field-efficient

With scanner, data storage, scanner control, and batteries integrated into a single unit, the Leica HDS6100 is easy to setup and carry for fast project execution. In addition, its

range (up to 79m for 90% surface reflectivity), improved high, and dual-axis (tilt) sensing capability can reduce the number of instrument and target setups, further cutting field time. These same features plus its extended temperature capability also increase the versatility of phase-based scanning.

Flexible scan control & registration options

Users can choose from three scanner control options. A side touch panel allows simple control. An optional wireless PDA allows "touch-free" control, plus visual inspection of jpeg scan images. For full 3D viewing, scan measurement, and rigorous quality assurance (QA), users can opt for powerful laptop control with Leica Cyclone SCAN, the industry's most popular and versatile scanner control software. For accurately registering (or stitching) multiple scans together, Leica Cyclone REGISTER software lets Leica HDS6100 users take advantage of either scan targets or "cloud-to-cloud" registration methods that don't require targets.

Leica Hds6100 Manual:

Handbook on Advances in Remote Sensing and Geographic Information Systems Margarita N. Favorskaya, Lakhmi C. Jain, 2017-02-24 This book presents the latest advances in remote sensing and geographic information systems and applications. It is divided into four parts focusing on Airborne Light Detection and Ranging LiDAR and Optical Measurements of Forests, Individual Tree Modelling, Landscape Scene Modelling, and Forest Eco system Modelling. Given the scope of its coverage, the book offers a valuable resource for students, researchers, practitioners, and educators interested in remote sensing and geographic information systems and applications.

Contributions to International Conferences on Engineering Surveying Alojz Kopáček, Peter Kyrinovič, Ján Erdélyi, Rinaldo Paar, Ante Marendić, 2020-10-19 This book presents contributions from the joint event 8th INGeo International Conference on Engineering Surveying and 4th SIG Symposium on Engineering Geodesy, which was planned to be held in Dubrovnik, Croatia, on April 14, 2020, and was canceled due to the COVID-19 pandemic situation. Editors, in cooperation with the Local Organisers, are decided to organize the Conference online on October 22-23, 2020. We would like to invite you to participate through http://ingeo.sig2020.hgd1952.hr/index.php/2020/08/31/ingeosig2020_virtual_conference_october_22_23_2020. The event brought together professionals in the fields of civil engineering and engineering surveying to discuss new technologies, their applicability, and operability.

Architectural Draughtsmanship Enrique Castaño Perea, Ernesto Echeverría Valiente, 2017-09-25 This is the proceedings of the XVI International Congress of Graphic Design in Architecture EGA 2016 held in Alcalá de Henares, Spain, in June 2016. About 200 professionals and researchers from 18 different countries attended the Congress. This book will be of interest to researchers in the field of architecture and Engineering. Topics discussed are Innovations in Architecture, graphic design, and architecture history and heritage, among others.
