[Genetics and epigenetics of chronic kidney disease](#) Jia Rao, Duan Ma, Aihua Zhang, Julia Hoefele, Andrew Mallett, 2023-03-15 [MorphoEvoDevo: A Multilevel Approach to Elucidate the Evolution of Metazoan Organ Systems](#), 2023-11-10

Analyzing animal development in a comparative framework provides a unique window into evolutionary history. With a long tradition that dates back to iconic 19th century zoologists such as Ernst Haeckel and Charles Darwin, Evolutionary Developmental Biology is firmly rooted in morphological research. While studies using a classical model system approach have resulted in considerable methodological progress, in particular by establishing molecular genetic tools to tackle questions surrounding animal development, it quickly became obvious that a broad comparative dataset involving as many taxa as possible is necessary for sound evolutionary inferences. Thus today's EvoDevo embraces morphological, molecular and experimental procedures interpreted in a phylogenetic framework in order to answer key questions that revolve around the evolution of animal cell types, organ systems and ultimately entire species.
