Trauth, 2025-03-17 MATLAB is used in a wide range of geoscientific applications such as for image processing in remote sensing for generating and processing digital elevation models and for analyzing time series This book introduces methods of data analysis in the earth sciences using MATLAB such as basic statistics for univariate bivariate and multivariate data sets time series analysis signal processing spatial and directional data analysis and image analysis The text includes numerous examples demonstrating how MATLAB can be used on data sets from the earth sciences The supplementary electronic material available online through Springer Link contains recipes that include all the MATLAB commands featured in the book and example data Structural Geology and Tectonics Field

Guidebook—Volume 2 Soumyajit Mukherjee, 2023-01-09 This book is the second volume of an edited work aiming to help novice geologists to explore terrains independently Geoscience fieldwork with focus on structural geology and tectonics has become more important in the last few years from both academic and industrial perspectives This book also works as a resource material for batches of students or geological survey professionals undergoing training as parts of their course curriculum training Industry persons on the other hand can get a first hand idea about what to expect in the field in case no academic persons are available with the team This book focuses on structural geology and tectonics and compiles terrains from several regions of the globe This book also includes field guide chapters for primary sedimentary structures **An Introduction to Reservoir Simulation Using MATLAB/GNU Octave** Knut-Andreas Lie, 2019-08-08 Presents numerical methods for reservoir simulation with efficient implementation and examples using widely used online open source code for researchers professionals and advanced students This title is also available as Open Access on Cambridge Core

Structural Geology Algorithms Richard W. Allmendinger, Nestor Cardozo, Donald M. Fisher, 2011-12-01 State of the art analysis of geological structures has become increasingly quantitative but traditionally graphical methods are used in teaching This innovative lab book provides a unified methodology for problem solving in structural geology using linear algebra and computation Assuming only limited mathematical training the book begins with classic orientation problems and progresses to more fundamental topics of stress strain and error propagation It introduces linear algebra methods as the foundation for understanding vectors and tensors and demonstrates the application of geometry and kinematics in geoscience without requiring students to take a supplementary mathematics course All algorithms are illustrated with a suite of online MATLAB functions allowing users to modify the code to solve their own structural problems Containing 20 worked examples and over 60 exercises this is the ideal lab book for advanced undergraduates or beginning graduate students It will also provide professional structural geologists with a valuable reference and refresher for calculations **Numerical Analysis Using MATLAB and Spreadsheets** Steven T. Karris, 2001 This text is intended for senior high school students community college students four year college students majoring in sciences and engineering and working professionals
