Structural Design Optimization Considering Uncertainties Yannis Tsompanakis, Nikos D. Lagaros, Manolis Papadrakakis, 2008-02-07
Uncertainties play a dominant role in the design and optimization of structures and infrastructures In optimum design of structural systems due to variations of the material manufacturing variations variations of the external loads and modelling uncertainty the parameters of a structure a structural system and its environment are not given fixed
Computational Science - ICCS 2002 Peter M.A. Sloot, C.J. Kenneth Tan, Jack J. Dongarra, Alfons G. Hoekstra, 2003-08-01 Computational Science is the scientific discipline that aims at the development and understanding of new computational methods and techniques to model and simulate complex systems The area of application includes natural systems such as biology environmental and geosciences physics and chemistry and synthetic systems such as electronics and financial and economic systems The discipline is a bridge between classical computer science logic complexity architecture algorithms mathematics and the use of computers in the aforementioned areas The relevance for society stems from the numerous challenges that exist in the various science and engineering disciplines which can be tackled by advances made in this field For instance new models and methods to study environmental issues like the quality of air water and soil and weather and climate predictions through simulations as well as the simulation supported development of cars airplanes and medical and transport systems etc Paraphrasing R Kenway R D Kenway *Contemporary Physics* 1994 There is an important message to scientists politicians and industrialists in the future science the best industrial design and manufacture the greatest medical progress and the most accurate environmental monitoring and forecasting will be done by countries that most rapidly exploit the full potential of computational science Nowadays we have access to high end computer architectures and a large range of computing environments mainly as a consequence of the enormous stimulus from the various international programs on advanced computing e.g. *Natural Image Statistics* Aapo Hyvärinen, Jarmo Hurri, Patrick O. Hoyer, 2009-04-21 Aims and Scope This

book is both an introductory textbook and a research monograph on modeling the statistical structure of natural images In very simple terms natural images are photographs of the typical environment where we live In this book their statistical structure is described using a number of statistical models whose parameters are estimated from image samples Our main motivation for exploring natural image statistics is computational modeling of biological visual systems A theoretical framework which is gaining more and more support considers the properties of the visual system to be reflections of the statistical structure of natural images because of evolutionary adaptation processes Another motivation for natural image statistics research is in computer science and engineering where it helps in development of better image processing and computer vision methods While research on natural image statistics has been growing rapidly since the mid 1990s no attempt has been made to cover the field in a single book providing a unified view of the different models and approaches This book attempts to do just that Furthermore our aim is to provide an accessible introduction to the field for students in related disciplines
