The present volume describes and explains the fundamentals of organic plastic solar cells in a manner accessible to both researchers and students. It provides an up to date and comprehensive account of these materials and corresponding devices which will play a key role in future solar energy systems.

Fuzzy Systems and Data Mining III A.J. Tallón-Ballesteros, K. Li, 2017-11-07
Data science is proving to be one of the major trends of the second decade of the 21st century. Even though the term was coined by Peter Naur in the mid 1960s as datalogy or the science of data, it is in the context of data analytics and especially of big data that data science has emerged as the new paradigm. Fuzzy and Crisp strategies are two of the most widespread approaches within the computational intelligence umbrella. This book presents 65 papers from the 3rd International Conference on Fuzzy Systems and Data Mining FSDM 2017 held in Hualien Taiwan in November 2017. All papers were carefully reviewed by program committee members who took into consideration the breadth and depth of the research topics that fall within the scope of FSDM. Offering a state of the art overview of fuzzy systems and data mining, the publication will be of interest to all those whose work involves data science.

Magnetic Micro-/nano-materials For Proteomics Analysis Nianrong Sun, Chunhui Deng, 2021-06-18
Magnetic micro nano materials for proteomics analysis gives a relatively comprehensive introduction to the preparation of magnetic materials and their application in proteomics by taking some representative examples which can provide an all around introduction for those who are interested in this field including senior specialists and students of the field. Read Full Review Analytical and Bioanalytical Chemistry
Proteomics is a study which takes the existence and activities of all proteins in cells as the research object for a more in depth understanding of the laws of life activity. Since the concept of proteome was proposed in 1995, proteomics has achieved rapid development during the past decades. As a significant part of post genomics, proteomics has strengthened its position and also become the forefront of scientific research in this century. Magnetic nanomaterials in proteomics analysis is an interdisciplinary field combining magnetic nanomaterials science and proteomics. From the current research, magnetic nanomaterials have shown great potential in complex proteomics research. This book focuses on the application of magnetic nanomaterials in the forefront of proteomics research and describes in details the synthetic methods, properties, principles and performance of magnetic nanomaterials in various branches of proteomics which includes digestion studies, enrichment of low abundance peptides as well as the analysis of phosphoprotein and glycoprotein. Past 10 years research on magnetic materials in proteomics is integrated and then the application of magnetic nanomaterials in proteomics analysis are stated systematically. This book can serve as reference book for teaching in the major of proteomics analysis and also can be reference book for researchers who are studying materials for proteomics.
