Interventional Magnetic Resonance Imaging Thomas Kahn, Harald Busse, 2012-08-27 The idea of using the enormous potential of magnetic resonance imaging MRI not only for diagnostic but also for interventional purposes may

seem obvious but it took major efforts by engineers physicists and clinicians to come up with dedicated interventional techniques and scanners and improvements are still ongoing Since the inception of interventional MRI in the mid 1990s the numbers of settings techniques and clinical applications have increased dramatically This state of the art book covers all aspects of interventional MRI The more technical contributions offer an overview of the fundamental ideas and concepts and present the available instrumentation The richly illustrated clinical contributions ranging from MRI guided biopsies to completely MRI controlled therapies in various body regions provide detailed information on established and emerging applications and identify future trends and challenges

**MRI of Short- and Ultrashort-T2 Tissues** Jiang Du, Graeme M. Bydder, 2024-02-21 This book comprehensively covers ultrashort echo time UTE zero echo time ZTE and other magnetic resonance imaging MRI acquisition techniques for imaging of short and ultrashort T2 tissues MRI uses a large magnet and radio waves to generate images of tissues in the body The MRI signal is characterized by two time constants spin lattice relaxation time T1 which describes how fast the longitudinal magnetization recovers to its initial value after tipping to the transverse plane and spin spin relaxation time T2 which describes how fast the transverse magnetization decays Conventional MRI techniques have been developed to image and quantify tissues with relatively long T2s However the body also contains many tissues and tissue components such as cortical bone menisci ligaments tendons the osteochondral junction calcified tissues lung parenchyma iron containing tissues and myelin which have short or ultrashort T2s These tissues are invisible with conventional MRI and their MR and tissue properties are not measurable UTE and ZTE type sequences resolve these challenges and make these tissues visible and quantifiable This book first introduces the basic physics of conventional MRI as well as UTE and ZTE type MRI including radiofrequency excitation data acquisition and image reconstruction A series of contrast mechanisms are then introduced and these provide high resolution high contrast imaging of short and ultrashort T2 tissues A series of quantitative UTE imaging techniques are described for measurement of MR tissue properties proton density T1 T2 T2 T1p magnetization transfer susceptibility perfusion and diffusion Finally clinical applications in the musculoskeletal neurological pulmonary and cardiovascular systems are described This is an ideal guide for physicists and radiologists interested in learning more about the use of UTE and ZTE type techniques for MRI of short and ultrashort T2 tissues
