

Land-use Planning and Flood Risk

Government policy on development and flood risk (PPS 25) ensures that flood risk is taken into account at all stages in the planning process.

Planning shapes the places where people live and work and the country we live in. It plays a key role in supporting the Government's wider economic, social and environmental objectives and the sustainable communities.

Foresight is the sound evidence base which:

- Gives the confidence to pursue a stronger policy line
- Provides the rationale for making planning a key part of Making Space for Water
- Demonstrates the effectiveness of planning policy in adapting to increased flood risk from a changing climate - supported by other major reviews
- Shows that a sequential risk-based approach is needed to best mitigate or adapt to future threats.

Climate Change, Water Security and Flooding, Sixteenth Report of Session 2003-2004, Report, Together with Formal Minutes, Oral and Written Evidence Great Britain. Parliament. House of Commons. Environment, Food and Rural Affairs Committee, 2004 The Committees report examines the actions that will be necessary to adapt to changes in flooding and water availability caused by climate change There are a number of steps that the Government should take to reduce future flood risk with a key consideration being the planning of new housing developments to avoid building on flood plains where possible Where this is necessary developments should be designed to be as resilient as possible to flooding utilising sustainable drainage systems and including areas such as parks in order to contain floodwater Existing sewer systems will need upgrading and new systems must be built to cope with higher storm flows Greater attention needs to be paid by the Government to the issue of water shortages due to drier summers including considering alternative water pricing mechanisms to relate costs more directly to amount used and ensuring building regulations pay greater attention to water efficiency Water companies must also do more to reduce water leakages

Building for a Changing Climate Peter F. Smith, 2009-12-01 There is now a practically universal consensus that our climate is changing rapidly and as a direct result of human activities While there is extensive debate about what we can do to mitigate the damage we are causing it is becoming increasingly clear that a large part of our resources will have to be directed towards adapting to new climatic conditions with talk of survivability replacing sustainability as the new and most pressing priority Nowhere is this more evident than in the built environment the stage on which our most important interactions with climatic conditions are played out In this frank yet pervasively positive book sustainable architecture guru Peter Smith lays out his vision of how things are likely to change and what those concerned with the planning design and construction of the places we live and work can and must do to avert the worst impacts Beginning with the background to the science and discussion of the widely feared graver risks not addressed by the politically driven IPCC reports he moves on to examine the challenges we will face and to propose practical responses based on real world experiences and case studies taking in flood and severe weather protection energy efficient retrofitting distributed power generation and the potential for affordable zero carbon homes He ends with a wider discussion of options for future energy provision This will be a provocative persuasive and crucially practical read for anyone concerned with the measures we must take now to ensure a climate proofed future for humanity
