Forests Environmental Issues Global Perspectives:

Forests James Fargo Balliett, 2014-12-18 Forests are considered the lungs of the planet as they consume and store carbon dioxide and produce oxygen. These biomes, defined as ecological communities dominated by long-lived woody vegetation, historically have provided an economic foundation for growing nations, supplying wood for buildings, firewood for fuel, and land for expanding cities and farms. For centuries, industrial nations in Europe and the United States have relied on large tracts of forestland for economic prosperity. The research presented in this book reveals that population pressures are causing considerable environmental distress in even the most remote forest areas. Three detailed case studies are presented. The first provides an assessment of illegal logging deep in South America's Amazon rain forest, a region closely tied to food and product demands thousands of miles away. The second examines the effect of increased hunting in Central Africa's Congo forest, which threatens wildlife, especially mammal species with slower reproductive cycles. Finally, the third describes encroachment on old-growth tropical forests on the Southern Pacific island of Borneo, which today is better managed thanks to the collective planning and conservation efforts of the governments of Brunei, Indonesia, and Malaysia. Urban forests: a global perspective Borelli, S., Conigliaro, M., Di Cagno, F., 2023-10-16 Urban forestry is not a one-size-fits-all solution; each city and region, with its own unique set of challenges and opportunities, requires tailored strategies. In recognition of the diversity and distinctiveness of urban forestry issues and their potential for mitigating environmental and socioeconomic inequality across the globe, FAO has asked experts around the world to share their views on how urban forests and trees are perceived and managed in their respective geographical areas, bringing together a broad range of regional perspectives. The primary goal of this publication is to provide a comprehensive overview of the current state of urban forestry worldwide. By showcasing the regional perspectives, insights, experiences, and case studies in urban and peri-urban forestry, UPF we hope to inspire individuals, communities, and policymakers to reimagine their relationships with urban green spaces.

Governmental Response to Environmental Challenges in Global Perspective Joseph G. Jabbar, O. P. Dwivedi, 1998 In our drive to improve human standards of living, we have paradoxically paid scant attention to the need for clean air and water, the impact of acid rain on agriculture, lakes, and rivers, the effect of pollutants on the ozone layer, the safe disposal of hazardous wastes, and the relationship between population growth and the environment. It seems that every time governments are faced with an apparent choice between economic development and the protection of the environment, priority is always given to the former. Short-term plans dictated by canons of political survival and expediency always seem to take precedence over long-term strategies. With politicians and decision makers deftly relegating environmental concerns to the realm of rhetoric, this book is an effort to better understand the problems faced by our global ecosystems. It is also the result of the authors' deep commitment to urge both citizens and their leaders the world over to work together for a better protection of the environment so that our planet may be saved for the present and for future generations. *Seeing the*

Global Perspectives on Sustainable Forest Management Dr. Clement A. Okia, 2012-04-25 This book is dedicated to global perspectives on sustainable forest management It focuses on a need to move away from purely protective management of forests to innovative approaches for multiple use and management of forest resources The book is divided into two sections the first section with thirteen chapters deals with the forest management aspects while the second section with five chapters is dedicated to forest utilization This book will fill the existing gaps in the knowledge about emerging perspectives on sustainable forest management It will be an interesting and helpful resource to managers specialists and students in the field of forestry and natural resources management

Global Perspectives in the Geography Curriculum Alex Standish, 2008-10-07 For geographers across the globe this book provides the arguments for a return to the teaching of geography and why they should reject the politicisation of the subject by education policy makers and politicians Standish's careful critique shows the necessity of a depoliticised geography curriculum the irony of which would be that it would ensure that every child could point to Iraq Iran and Afghanistan on a map Prof Dennis Hayes Oxford Brookes University UK A prescient and critical analysis of the changing face of geography teaching This book deserves to be widely read and debated Alex Standish's book puts current trends in geography teaching in historical and critical context It comprises a forthright and timely defence of geographical education for its own sake Dr Jim Butcher FRSA Department of Sport Science Tourism and Leisure Canterbury Christ Church University Since the early 1990s educational policy makers and some subject leaders have been seeking to fundamentally change the teaching of geography in UK and US schools from a subject which encourages students to explore spatial concepts ideas and skills to a more ethics based subject concerned with the promotion of environmentalism cultural diversity and social justice In this book the new approach is critically examined within a historical and ideological context addressing a number of fundamental questions Should geography be used as a tool for the delivery of citizenship ideals How does this affect the intellectual and moral value of geographical education for young people If the state and teachers are taking more responsibility for the values attitudes and emotional responses of students how will they learn to develop these qualities for themselves If global perspectives shift the focus of education from learning about the outside world to learning about the self what is its vision of social progress and conception of social change This book advocates a return to liberal models of education arguing that the new approach to geography currently being promoted for schools fundamentally undermines the educational value of the subject and the freedom of young people to shape the world in which they live A vital resource for teachers and student teachers alike *Global Perspectives in the Geography Curriculum* makes a significant contribution to the growing debate about the future direction of the discipline itself

Global Concerns for Forest Resource Utilization Atsushi

Yoshimoto, Kiyoshi Yukutake, 2013-11-11 This book is a collection of papers presented at the international symposium on forest sector analysis held in Miyazaki Japan in 1998 It is structured with three themes understanding global forest sector issues discussing the contribution of modeling efforts to forest sector analysis and discussing the role of Japanese forest policy in a global sense The most important features are the case studies using various types of forest sector models From a modeling perspective changes in modeling efforts include more detail of spatial and multiple market levels intergenerational welfare concerns non market valuation issues and explicit treatment of the uncertainty inherent in both the policy process and in the biophysical systems The reader of this book will benefit not only from presentation of forest utilization issues in different nations but also from the interrelatedness of the theory and application of forest sector modeling

World Forests, Society and Environment Matti Palo, J. Uusivuori, 2012-12-06 This book addresses current global and regional issues concerning the world's forests societies and the environment from an independent and non governmental point of view A main message is that cooperation on a global scale is not only commendable but essential if solutions to the problems facing the world's forests are to be found To achieve this modern science needs to find a clearer picture of relationships between forests human activity and the environment and of the consequences of environmental change for the ability of societies to survive Part I Editorial Perspectives is analyzing the ongoing globalization processes of forests societies and the environment Part II Society and Environment reviews worldwide trends with significance for the future of forests and forestry While the trends are influenced by forest sector issues that sector is influenced to a much larger extent by external factors such as demography urbanization or technological development Part III Importance of Forests looks at the value of the goods and services of forests tangible and intangible market and non market and concludes that failure to recognize their full value is one of the crucial impediments to sustainable development In Part IV Global Forum scientists take up global forestry themes deforestation trade and the environment climate change biodiversity with the aim of stimulating wider discussion Part V Regional Forum looks at major themes of particular relevance to Africa Asia Pacific Latin America North America and Europe such as farm and agroforestry corruption and concessions urban forestry and environmental conflicts Part VI introduces the special theme forest sectors in transition economies Teams of scientists from Russia and China focus on the implications of the transition from plan to market economy illuminating both the very different nature of the forest sector in the two countries and the different transition paths that they have adopted In the past millennium the entire world has been discovered In the past half century the contribution of forests to the economy worldwide has been perceived while only recently have their societal and environmental benefits been globally recognized Globalization is a demanding process requiring knowledge and information This book offers knowledge facts and information but also values from diverse human and cultural perspectives about world forests society and environment to help us towards equity in our use of the global

Research Anthology on Ecosystem Conservation and Preserving Biodiversity Management Association, Information Resources, 2022-04-08 In today's rapidly evolving world it has never been more critical to consider key environmental issues such as climate change pollution and endangered species Society faces an unknown future where the fate of the environment is continuously in flux based on current preservation initiatives that governments develop In order to ensure the world is protected moving forward further study on the importance of securing environments ecosystems and species is necessary to successfully implement change The Research Anthology on Ecosystem Conservation and Preserving Biodiversity considers the best practices and strategies for protecting our current ecosystems as well as the potential ramifications of failing to implement policies Society is at a crossroads where if we continue to ignore the danger and warning signs brought about by environmental issues we will be unable to maintain a healthy environment Covering essential topics such as extinction climate change and pollution this major reference work is ideal for scientists industry professionals researchers academicians policymakers scholars practitioners instructors and students

Freshwater James Fargo Balliett, 2014-12-18 Freshwater is our planet's most precious resource and also the least conserved Freshwater makes up only 3 percent of the total water on the planet and yet the majority 1.9 percent is held in a frozen state in glaciers icebergs and polar ice fields This leaves approximately one half of 1 percent of the total volume of water on the planet as freshwater available in liquid form This book traces the complex history of the steady growth of humankind's water consumption which today reaches some 9.7 quadrillion gallons per year Along with a larger population has come the need for more drinking water larger farms requiring extensive irrigation and more freshwater to support business and industry At the same time such developments have led to increased water pollution

Three detailed case studies are included The first looks at massive water systems in locations such as New York City and the efforts required to protect and transport such resources The second shows how growth has affected freshwater quality in the ecologically unique and geographically isolated Lake Baikal region of eastern Russia The third examines the success story of the privatized freshwater system in Chile and consider how that country s water sources are threatened by climate change

Oceans James Fargo Balliett,2014-12-18 Covering 71 percent of the planet these saline bodies of water provided the unique conditions necessary for the building blocks of life to form billions of years ago This book explains how our oceans continue to support and influence life in important ways by providing the largest global source of protein in the form of fish populations by creating and influencing weather systems and by absorbing waste streams such as airborne carbon It is shown how oceans have an almost magnetic draw almost half of the world s population lives within a few hours of an ocean Although oceans are vast in size exceeding 328 million cubic miles 1 37 billion cubic kilometers they have been influenced by and have influenced humans in numerous ways The book includes three detailed case studies The first focuses on the most remote locations along the Mid Atlantic Ridge where new ocean floor is being formed twenty thousand feet underwater The second considers the Maldives a string of islands in the Indian Ocean where increasing sea levels may force residents to abandon some communities by 2020 The third describes the North Sea at the edge of the Arctic Ocean where fishing stocks have been dangerously depleted as a result of multiple nations unrelenting removal of the smallest and largest species

Mountains James Fargo Balliett,2016-07-01 Always awe inspiring mountainous areas contain hundreds of millions of years of history stretching back to the earliest continental landforms This book shows how mountains are characterized by their distinctive geological ecological and biological conditions Often they are so large that they create their own weather patterns They also store nearly one third of the world s freshwater in the form of ice and snow on their slopes Despite their daunting size and often formidable climates mountains are affected by growing local populations as well as distant influences such as air pollution and global climate change Three detailed case studies are presented The first shows how global warming in East Africa is harming Mount Kenya s regional population which relies on mountain runoff to irrigate farms for subsistence crops The second examines the fragile ecology of the South Island Mountain in New Zealand s Southern Alps and how development threatens the region s endemic plant and animal species The third discusses the impact of mountain use over time in New Hampshire s White Mountains where management efforts have been used to limit the growing footprint of millions of annual visitors and alpine trekkers

Globalization and New Geographies of Conservation Karl S. Zimmerer, 2006-09-15 Examining the geographical dimensions of environmental management and conservation activities implemented on landscapes worldwide Globalization and New Geographies of Conservation creates a new framework and collects original case studies to explore recent developments in the interaction of humans and their environment Globalization and New Geographies of Conservation makes four important arguments about the recent coupling of conservation and globalization that is reshaping the place of nature in human environmental change First it has led to an unprecedented number of spatial arrangements whose environmental management goals and prescribed activities vary along a spectrum from strict biodiversity protection to sustainable utilization involving agriculture food production and extractive activities Conservation and globalization are also leading by necessity to new scales of management in these activities that rely on environmental science thus shifting the spatial patterning of humans and the environment This interaction results as well in the unprecedented importance of boundaries and borders transnational border issues pose both opportunities and threats to global conservation proposed by organizations and institutions that are themselves international Lastly Globalization and New Geographies of Conservation argues that the local level has been integral to globalization while the regional level is often eclipsed at the peril of the successful implementation of conservation and management programs Bridging the gap between geography and life science Globalization and New Geographies of Conservation will appeal to a broad range of students of the environment conservation planning biodiversity management and development and globalization studies

Teaching Humanities & Social Sciences Rob Gilbert, Libby Tudball, Peter Brett, 2019-10-17 Teaching Humanities and Social Sciences 7e prepares teachers to develop and implement programs in the humanities and social sciences learning area from F 10 It successfully blends theory with practical approaches to provide a basis for teaching that is engaging inquiry based and relevant to students lives Using

Version 8.1 of the Australian Curriculum the text discusses the new structure of the humanities and social sciences learning area. Chapters on history, geography, civics and citizenship and economics and business discuss the nature of these subjects and how to teach them to achieve the greatest benefit for students both as sub-strands within the Year 6-7 HASS subject and as distinct Year 7-10 subjects. Throughout the book maintains its highly respected philosophical and practical orientation including a commitment to deep learning in a context of critical inquiry. With the aid of this valuable text teachers can assist primary, middle and secondary students to become active and informed citizens who contribute to a just, democratic and sustainable future.

The Future Use of Nordic Forests Erik Westholm, Karin Beland Lindahl, Florian Kraxner, 2015-02-16

Diverse as they are in their histories and in the organization of their forest sectors, most Nordic countries have this in common: their economies and cultures are substantially based on the utilization of various forest resources. This book explores Nordic forest futures and presents research results that form part of a scientific foundation for considering how to balance the functions of forests. It is particularly concerned with global trends that may affect the future use of boreal forests. Chapters investigate inter alia the growing world population and the expected economic growth in countries with huge populations and assess the resulting pressure on all land-based resources. Authors examine the urgent need for solutions to the energy crisis, consider worrying climate scenarios and provide a global outlook on bioenergy futures. Readers will discover how these developments will and must influence long-term strategic decisions on the future use of Nordic forests. The challenges and possible responses for future forest governance and forestry issues emerge as the chapters go on to consider the multiple pressures in particular on the Swedish Forestry Model among other themes. By bringing together a distinguished group of internationally renowned scientists representing a diverse set of disciplines covering political science, geography, rural development, forest economics, history and geo-sciences, this book constitutes an exceptionally profound and thoughtful futures study.

Atmospheric Nitrogen Deposition to Global Forests Enzai Du, Wim de Vries, 2023-10-22

Atmospheric Nitrogen Deposition in Global Forests: Spatial Variation, Impacts and Management Implications provides the most comprehensive knowledge on spatial variation and ecological impacts of reactive nitrogen deposition in global forests as well as forest management options to mitigate the negative impacts. Written and edited by international experts in the field, this book synthesizes recent research developments and insights in monitoring and modeling nitrogen deposition in global forests. The book also assesses ecological impacts of enhanced nitrogen deposition on forest structure and function and responses of forest ecosystems to decreasing nitrogen deposition in regions such as the European Union and North America. Finally, the book reviews indicators and thresholds for nitrogen saturation in global forests and analyzes remediation options to reduce impacts of excess nitrogen deposition. This is an important resource for researchers in forestry and biodiversity conservation as well as graduate students, policymakers and others who want to understand environmental issues of reactive nitrogen deposition in global

forests Offers a systematic view of the ecological impacts of enhanced nitrogen deposition Provides the most comprehensive knowledge on spatial variation and the ecological impacts of reactive nitrogen deposition in global forests Presents expert research and findings on forest management options to remediate negative impacts
