

18.4a Location of the ABS control unit

18.4b Push the catch from left to right to release...

6 Turn the mode select switch ON, then turn the ignition (main) switch ON. The fault code will be represented as a series of flashes of the ABS indicator light.

7 All fault codes are represented by two-digit numbers (see Section 18). When the ignition is switched ON the ABS indicator light will come on initially for 2 seconds, then go off for approximately 3.6 seconds. It will then display the fault code in a series of 0.4 second flashes with a delay of 1.6 seconds between the 'tens' and the 'ones'. Eg. fault code 13 will appear as one 0.4 second flash followed by a 1.6 second delay followed by three 0.4 second flashes. The fault code will be repeated after a further 3.6 second delay.

8 If there is more than one fault, the flashes will appear in groups in ascending order, with a 3.6 second delay between each group.

9 Record the code(s) and identify the fault(s) from the table in Section 18.

10 Turn the ignition (main) switch OFF. **Note:** Don't disconnect the battery or the ABS control unit connector until the fault code has been confirmed - disconnection will erase the control unit memory.

11 Once the faults have been corrected, delete the fault codes from the control unit memory as follows. Follow the procedure in Step 6 to display the fault codes, and, while they are being displayed, turn the mode select switch OFF. Now turn the switch ON and OFF three times at 1 second intervals to start the deletion process. When the fault codes have been deleted the ABS indicator light should flash to confirm this.

12 To confirm that the control unit memory has been cleared, follow the procedure in Step 7 - the ABS indicator light should come on but not flash.

13 Once the reset procedure has been confirmed, turn the ignition (main) switch OFF, disconnect the mode select switch and install

18.4c ... then disconnect the connector

the connector cover. Install the rider's seat (see Chapter 8).

14 Check that the ABS is operating normally (see Step 2).

18 ABS system checks

1 Suzuki advise that the mechanical and hydraulic components of the brake system should be inspected before undertaking any electrical checks. Pay particular attention to the brake pads and fluid level (see Chapter 1). Check that no dirt has lodged between the front or rear wheel speed sensors and the rotors. The ABS control unit may diagnose a fault if tyre sizes other than those specified by Suzuki are fitted, machine has been run continuously over the bumpy roads. A fault may also be diagnosed running with the machine supported on an auxiliary stand.

2 Check that the battery is fully charged (see Chapter 9).

18.4d ABS control unit wiring connector terminal numbering - loom side

3 Ensure the ignition (main) switch is OFF, then disconnect the battery negative (-) lead (see Chapter 9).

4 The ABS control unit is located inside the frame on the left-hand side (see illustration). Follow the procedure in Chapter 4A, Section 2, to remove the fuel tank. Locate the control unit, then release the wiring connector catch and disconnect the connector (see illustrations). Check for continuity between the black/white wire terminal No. 9 on the loom side of the connector (see illustration) and the terminal on the battery negative lead. There should be continuity. If there is no continuity, inspect the black/white wire for damage (see Wiring Diagrams at the end of Chapter 9). **Note:** Refer to Chapter 8, Section 2, for general fault finding procedures and equipment.

5 Having obtained the fault code following the procedure in Section 17, refer to the table below and the relevant Steps to identify and correct the faulty component. Unless specified otherwise, carry-out all checks with the ignition (main) switch OFF.

6 If, after a thorough check, the source of a fault has not been identified, have the ABS control unit tested by a Suzuki dealer.
