Jones,2004-02-26 Compiled by a team of experts this textbook has been designed for elementary university courses in astronomy and astrophysics It starts with a detailed discussion of our nearest star the Sun and describes how solar physicists have come to understand its internal workings It then considers how astronomers go about studying the basic physical properties and life cycles of more distant stars and culminates with a discussion of the formation of exotic objects such as neutron stars and black holes Written in an accessible style that avoids complex mathematics and illustrated in colour throughout this book is suitable for self study and will appeal to amateur astronomers as well as undergraduate students It contains numerous helpful learning features such as boxed summaries student exercises with full solutions and a glossary of terms The book is also supported by a website hosting further teaching materials **Wetland Ecology** Paul A. Keddy,2000-09-28 Wetlands are among some of the most productive and biologically diverse ecosystems on earth Their very diversity has produced a fragmented area of study where each wetland type has tended to be considered in isolation In contrast Paul Keddy winner of the 2007 National Wetlands Award for Research provides a synthesis of the existing field of wetland ecology using a few central themes These themes include basic characteristics of wetlands key environmental factors that produce wetland community types and some unifying problems such as assembly rules restoration and conservation The volume draws upon a complete range of wetland habitats and geographic regions including Californian vernal pools Amazonian floodplains and Russian peat bogs No other book provides ecological syntheses over the entire geographical and habitat range of wetlands making Wetland Ecology essential reading for anyone planning research or management in wetland habitats regardless of specific area of interest *Earth Science*
