applications which explains the length of the book The text first shows how real life provides some guidance for the selection of axioms for the basis of a logical system for instance Boolean classical intuitionistic or minimalistic logic From such axioms the text then derives detailed explanations of the elements of modern logic and mathematics set theory arithmetic number theory combinatorics probability and graph theory with applications to computer science The motivation for such detail and for the organization of the material lies in a continuous thread from logic and mathematics to their uses in everyday life
